Abstract

As a result of bryological excursion in the Ardahan Province in Turkey (Northeast Anatolia), a total of 408 bryophytes belonging to 141 genera and 55 families were determined from 120 different localities, including one hornwort, 37 liverworts and 370 mosses. Among them, *Hennediella heimii*, *Syntrichia minor* and *Bryum warneum* are reported for the second time from Turkey. Also, almost all bryophyte taxa are new for Ardahan Province.

Резюме

В результате бриологических исследований в 120 точках в провинции Ардахан в северо-восточной Турции (Северная Анатолия), выявлено 408 видов и разновидностей мохообразных из 141 родов и 55 семейств. В их числе 1 представитель антоцеротовых, 37 печеночников, 370 мхов. Из редких видов можно особо отметить *Hennediella heimii*, *Syntrichia minor* и *Bryum warneum*, находки которых – вторые для Турции. Почти все виды – новые для провинции.

INTRODUCTION

To date, four Bryophytes (*Barbilophozia lycopodioides* (Wallr.) Loeske; *Hygrohypnum ochraceum* (Turner ex Wilson) Loeske, *Hageniella micans* (Mitt.) B.C. Tan & Y. Jia and *Herzogiella turfacea* (Lindb.) Z.Iwats.) have been reported from Ardahan region (Batan *et al.*, 2015; Batan *et al.*, 2016a; Batan *et al.*, 2016b; Batan & Özdemir, 2016). Ardahan province is located in the Eurosiberian floristic region. It is surrounded by Georgia to the North, Kars to the East, Erzurum to the South and Artvin to the West.

In the East Anatolia region (including Ardahan), the elevation of mountains exceeds 2000–3000 m. Ardahan is a mountainous province, mostly situated above 2000 m elevation. Black Sea Mountains and Caucasian Mountains hold the rain clouds, and so the area has the continental climate with long, cold winter and heavy snowfall. Also, Ardahan (including City center, Çıldır, Hanak, Damal and Göle districts) has warm and short summers with cool nights. The annual mean air temperature is below 4°C. The year's warmest month is July with 35°C and the coldest month is January with –38°C. The average annual rainfall is 533.4 mm. The most rainfall (rainy season) is seen in April, May and June. The annual average humidity is 71% (Akman, 1999; Yazıcı *et al.*, 2011).

On the other hand, the climate is different in Posof district (Ardahan) (Fig. 1), in where rainy winters and

hot summers. The precipitation is seen in every season. Average annual precipitation is 600 mm (Akman, 1999; Yazıcı *et al.*, 2011).

Alpine meadows covering a larger area especially in south and north of Ardahan province (including City center, Çıldır, Hanak, Damal and Göle districts), are common in this region. Forest are very small consisting of *Pinus sylvestris* L. occurring on outskirt of the some mountains in higher parts of the Ardahan region. *Salix* sp., *Populus* sp., *Pyrus* sp. and *Prunus* sp. are especially predominant in emplacements. Posof district has a rich forest cover, consisting of *Quercus* sp., *Pinus* sp. *Picea* sp., *Fagus* sp., *Carpinus* sp., *Ulmus* sp., *Corylus* sp. and alpin meadow on the mountains (Baytop & Denizci, 1963; Yazıcı *et al.*, 2011).

The paper adds noticeable informations to knowledge of the bryophyte flora of Ardahan, East Anatolia region and Turkey. This is the first checklist of bryophytes for Ardahan province.

MATERIALS AND METHODS

The bryophyte samples were collected in 120 different localities between 2 June 2014 and 13 August 2016 from Ardahan province in Turkey (Fig. 1). The samples were examined with Carl Zeiss Stemi 2000-C stereomicroscope and Carl Zeiss Axio Imager A2 light microscope. Identifications were determined by consulting keys (Crum & Anderson, 1981; Ireland, 1982; Nyholm, 1986,

Pelliaceae H. Klinggr.

Pellia endiviifolia (Dicks.) Dumort. – 17, 111, 113, 118: on wet soil.

P. epiphylla (L.) Corda – 16: on wet soil.

P. neesiana (Gottsche) Limpr. – 18: on wet soil.

Calypogeiaciae Arnell

Calypogeia muelleriana (Schiffn.) Müll. Frib. – 16: on wet soil.

Jungermanniaceae Rchb.

Jungermannia atrovirens Dumort. – 105: on soil and rock.

J. gracillima Sm. – 105: on soil and rock by stream.

J. hyalina Lyell – 105: on rock by stream.

Tritomaria quinquedentata (Huds.) H. Buch – 16: on wet rock.

Lophocoleaceae Vanden Berghe

Chiloscyphus polyanthos (L.) Corda – 15, 62, 66, 68, 78, 119, 120: on wet soil and rock.

C. pallescens (Ehrh. ex Hoffm.) Dumort. – 105: on wet soil and rock.

Lophocolea bidentata (L.) Dumort. – 7, 10, 12, 16, 18, 22, 55, 78: on rock.

L. heterophylla (Schrad.) Dumort. – 1, 2, 5, 6, 7, 15, 18, 21, 50, 56, 79, 84: on trunk of tree.

L. minor Nees – 2, 17, 113: on trunk of tree and rock.

Scapaniaceae Mig.

Barbilophozia barbata (Schmidel ex Schreb.) Loeske – 4, 7, 19, 21, 22, 39, 50, 56, 59, 63, 71, 76, 78: on soil and rock.

B. hatcheri (A. Evans) Loeske – 19, 56, 59: on rock.

Diplophyllum albicans (L.) Dumort. – 59, 86, 103: on soil and rock.

Lophozia ventricosa (Dicks.) Dumort. – 114, 116: on wet soil.

Scapania aspera Bernet et M. Bernet – 12, 59, 103: on wet soil and rock.

S. nemorea (L.) Grolle – 2, 12: on wet soil and rock.

S. subalpina (Nees ex Lindenb.) Dumort. – 2, 12: on wet soil by stream.

Arnelliaceae Nakai

Southbya tophacea (Spruce) Spruce – 18, 68, 119, 120: on soil and rock.

Plagiochilaceae Müll. Frib.

Plagiochila asplenoides (L. emend. Taylor) Dumort – 1, 18, 47, 73, 113: on soil and rock.

P. poreloides (Torrey ex Nees) Lindenb – 18, 73: on soil and rock.

Porellaceae Cavers

Porella cordaeana (Huebener) Moore – 23, 56, 97: on rock.

P. obtusa (Taylor) Trevis. – 18, 59: on rock.

P. pinnata L. – 103: on soil and rock by stream.

P. platyphylla (L.) Pfeiff. – 23, 25, 55, 56, 59, 65: on rock.

Radulaceae Müll. Frib.

Radula complanata (L.) Dumort. – 8, 12, 18, 23, 39, 50, 56, 57: on rock.

R. lindbergiana Gottsche ex C. Hartm. – 1, 23, 25, 57, 59: on rock.

Frullaniaceae Lorch

Frullania dilatata (L.) Dumort. – 57, 86: on trunk of tree.

F. tamarisci (L.) Dumort. – 105: on rock.

Metzgeriaceae H. Klinggr.

The status of taxa for Turkey were evaluated by reviewing the related literature (Uyar & Çetin, 2004; Kürschner & Erdağ, 2005; Ozenoglu-Kiremit & Keceli, 2009; Kürschner & Frey, 2011; Ros *et al.*, 2013).

LIST OF SPECIES

The nomenclature of the species follows Ros *et al.* (2007) for liverworts and Ros *et al.* (2013), Plášek *et al.* (2015) and Lara *et al.* (2016) for mosses. Vouchers are deposited in the Biology Department, Faculty of Science, Karadeniz Technical University, Turkey. The collected bryophytes were investigated and 408 taxa (species, subspecies and varieties) belonging to 141 genera and 55 families were identified. Of them, *Hennediella heimii*, *Syntrichia minor* and *Bryum warneum* are recorded for the second time from Turkey.

Hylocomium splendens (Hedw.) Schimp. – 3, 6, 7, 8, 9, 11, 14, 20, 29, 34, 59, 64, 69, 79, 80, 84, 85, 97, 98, 103, 104, 108, 110: on soil.

Pleurozium schreberi (Willd. ex Brid.) Mitt. – 7, 48, 59, 67, 71, 73: on soil

Rhytidadelphus triquetrus (Hedw.) Warnst. – 1, 6, 7, 8, 9, 20, 34, 48, 49, 50, 57, 59, 61, 67, 71, 73, 77, 78, 79, 80, 84, 85, 86, 90, 98, 103, 104, 105, 109, 110, 113, 114: on soil.

Pylaisiadelpheaceae Goffinet & W.R.Buck

Platygyrium repens (Brid.) Schimp. – 94: on trunk of tree.

Rhytidaceae Broth.

Rhytidium rugosum (Hedw.) Kindb – 9, 11, 18, 20, 67, 71, 90, 97, 99, 102, 103, 104, 110, 112, 114, 115: on soil.

DISCUSSION

We determined 408 taxa (species, subspecies and varieties) belonging to 141 genera in the study. Furthermore, *Hennediella heimii*, *Syntrichia minor* and *Bryum warneum* are recorded for the second time in Turkey.

Syntrichia minor known from eastern Canary Islands, Cyprus, Greece, Iran, Jordan, Lebanon, Morocco, Spain, Turkey (Ahayoun *et al.*, 2013; Gallego *et al.*, 2000; Kürschner and Frey, 2011; Ros *et al.*, 2013; Ören *et al.*, 2015). It has been so far known only from the Black Sea region in Turkey (Kastamonu province) (Ören *et al.*, 2015). This new locality extends its distribution range to the northeast Anatolia and Caucasus (Turkey).

Hennediella heimii reported from North America, South America, Europe, Asia, Pacific Islands (New Zealand), Australia, Antarctica (Crum & Anderson, 1981; Frey *et al.*, 2006; Ros *et al.*, 2013).

Hennediella heimii has been so far known only from the Eastern Anatolia Region in Turkey (Hazer, 2010). This new record extends its distribution range to the East Anatolia (Turkey).

Bryum warneum first time reported from İğdır province, Ağrı Mountain, on wet soil beside stream by Batan & Özdemir (2013) in Turkey. This species is mainly known in western and Baltic coasts of Europe, from N. France to arctic Norway. It was also reported from North temperate and montane areas in the Himalayas and the Altai Mountains (C. Asia) and Canada (N. America), Alaska (Steere, 1978; Shaw & Marcotte, 1983; Nyholm, 1993; Smith, 2004; Frey *et al.*, 2006; Kürschner & Frey, 2011; Ros *et al.*, 2013). This record extends its distribution range to the Eastern Anatolia Region in Turkey.

The family with the highest number of species in this study were *Pottiaceae* (61), *Brachytheciaceae* (45), *Grimmiaceae* (35), *Bryaceae* (30), *Amblystegiaceae* (22), *Hypnaceae* (22), *Orthotrichaceae* (20), *Dicranaceae* (16), *Mniaceae* (12), *Mielichhoferiaceae* (9), *Polytrichaceae* (9), *Bartramiaceae* (8), *Ditrichaceae* (7), *Encalyptaceae* (6), *Rhabdoweisiaceae* (6), *Pseudoleskeaceae* (6), *Plagiotheciaceae* (5).

The most common genera of mosses are *Grimmia* (19), *Tortula* (17), *Schistidium* (15), *Hypnum* (14), *Brachythecium* (14), *Dicranum* (13), *Ptychostomum* (13), *Bryum* (12), *Orthotrichum* (12), *Syntrichia* (11), *Didymodon* (11), *Pohlia* (9), *Encalypta* (6) and *Mnium* (6) in the study area. Moreover genus *Grimmia* has the greatest diversity among the genera (represented by 19 taxa, growing on mostly rocks). The second most common genus is *Tortula* (represented by 17 taxa, occurring mostly on soil).
