KEY WORDS: *Chalcoscirtus*, Salticidae, synonymies, descriptions, diagnoses, Central Asia, Caucasus.

КЛЮЧЕВЫЕ СЛОВА: *Chalcoscirtus*, Salticidae, синонимика, описания, диагнозы, Центральная Азия, Кавказ.

ABSTRACT: A synopsis of 27 *Chalcoscirtus* species in the fauna of Central Asia and the Caucasus is presented. Two species are revalidated: *C. brevicymbialis* Wunderlich, 1980 and *C. ansobicus* Andreeva, 1976. Four species are newly synonymized: *Euophrys thorelli asiatica* Charitonov, 1951 and *Chalcoscirtus pauper* Wesołowska, 1996 under *C. infimus* (Simon, 1868); *Chalcoscirtus pavuk* Marusik, 1991 under *C. parvulus* Marusik, 1991; and *Euophrys elongata* Caporiacco, 1935 under *C. glacialis* Caporiacco, 1935. *C. martensi parvulus* Marusik, 1991 is elevated to full species: *C. parvulus* Marusik, 1991, stat.n. Unknown sexes are described and illustrated for five species: *C. ansobicus* Andreeva, 1976 (♂), *C. lepidus* Wesołowska, 1996 (♂); *C. platnicki* Marusik in Marusik & Eskov, 1995 (♀); *C. tanasevichi* Marusik, 1991 (♀); and *C. zyuzini* Marusik, 1991 (♀). Five new species are described: *C. bortolgois* sp.n. (♀, Mongolia), *C. charynensis* sp.n. (♀, Almaty Area, Kazakhstan), *C. iranicus* sp.n. (♀, Iran) and *C. michailovi* sp.n. (♂, Almaty Area, Kazakhstan), all from the subgenus *Chalcoscirtus*; and *C. koponeni* sp.n. (♀, Tuva) from the subgenus *Chalcosibiricus*. Most of the species are figured and diagnosed, and their distributions mapped; complete reference lists for each species with regard to the study area are given as well.

РЕЗЮМЕ: Работа является конспектом 27 видов *Chalcoscirtus* в фауне Центральной Азии и Кавказа. Восстановлена валидность двух видов: *C. brevicymbialis* Wunderlich, 1980 и *C. ansobicus* Andreeva, 1976. Четыре вида впервые синонимизированы: *Euophrys thorelli asiatica* Charitonov, 1951 и *Chalcoscirtus pauper* Wesołowska, 1996 с *C. infimus* (Simon, 1868); *Chalcoscirtus pavuk* Marusik,

1991 с *C. parvulus* Marusik, 1991; и *Euophrys elongata* Caporiacco, 1935 с *C. glacialis* Caporiacco, 1935. Таксonomicкий ранг *C. martensi parvulus* Marusik, 1991 повышен до ранга самостоятельного вида: *C. parvulus* Marusik, 1991, stat.n. Даны описания и иллюстрации противоположного пола для пяти видов: *C. ansobicus* Andreeva, 1976 (♂), *C. lepidus* Wesołowska, 1996 (♂); *C. platnicki* Marusik in Marusik & Eskov, 1995 (♀); *C. tanasevichi* Marusik, 1991 (♀); и *C. zyuzini* Marusik, 1991 (♀). Описаны пять новых видов: *C. bortolgois* sp.n. (♀, Алматинская область, Казахстан), *C. iranicus* sp.n. (♀, Иран) и *C. michailovi* sp.n. (♂, Алматинская область, Казахстан), все из подрода *Chalcoscirtus*; и *C. koponeni* sp.n. (♀, Тыва) из подрода *Chalcosibiricus*. Большинство видов снабжены рисунками, диагнозами и картами с их ареалом; также к каждому виду даны полные списки библиографических ссылок, касающиеся изученной территории.

Introduction

The salticid genus *Chalcoscirtus* Bertkau, 1880 has recently been reviewed by one of us [Marusik, 1990, 1991a, b] in the scope of the entire Palaearctic fauna. According to these data, this genus numbers no less than 19 species, of which 17 have hitherto been reported in Central Asia and the Caucasus. More recently, further two species have been described from Turkmenistan [Wesołowska, 1996].

However, nearly a half of the species reported to date have only been described/recoded from a single sex and/or from a few or a single locality, or both. Since new abundant material of Central Asian

Chalcoscirtus has recently become available for study, it appears possible now to solve some of the existing taxonomic problems as well as to refine the distribution of most of the hitherto reported Palaearctic species. Thus, the present study is an up-to-date review of *Chalcoscirtus* in the faunas of Central Asia and the Caucasus. Altogether, 27 species are treated here, including the description of five new congeners.

Of the *Chalcoscirtus* species so far reported from the areas in question [Nenilin, 1984a; Mikhailov, 1997], two are excluded from further consideration.

Chalcoscirtus orientalis was reported by Andreeva [1975] and then Prószyński [1976] from Tajikistan: Beshkent Valley and Gandzhyna. However, this species has never been properly described and must be considered as a *nomem nudum* [see also Prószyński, 1990].

Chalcoscirtus flavipes Caporiacco, 1935 was reported by Prószyński [1976] from the Pamirs, referring to Andreeva's work [1976], which actually never contained these data. So this seems to be a wrong record in Central Asia [cf. Mikhailov, 1997]. Prószyński [1976: figs 362, 363] has illustrated a female of *C. flavipes*. So, based on his illustrations, we can state that this species seems to be absent from Middle Asia indeed. At least we have failed yet to find it among the material studied/revised.

Material and methods

This study is based on an examination of over 475 adult specimens newly collected from numerous localities of Central Asia and the Caucasus. All *Chalcoscirtus* material, including types, earlier published by Ovtsharenko [1978], Nenilin [1984a,b], Marusik [1988, 1990, 1991a,b] and Wesołowska [1996], has also been re-examined.

Only relevant literature concerning the regions in question is considered here. For a complete list of the taxonomic sources for each species involved see Prószyński [1990] and Platnick [1993, 1997].

Abbreviations of the institutions and individuals whose material was received on loan or as donations are as follows: AVG — personal collection of Mr. A.V. Gromov, Almaty, Kazakhstan; FSCA — Florida State Collection of Arthropods FDACS, Division of Plant Industry, Gainesville, Florida, U.S.A. (G.B. Edwards); ISE — Zoological Museum, Institute for Systematics and Ecology of Animals, Novosibirsk, Russia (D.V. Logunov); IZW — Institute of Zoology, Polish Academy of Sciences, Warsaw, Poland (J. Prószyński); PSU — Chair of Zoology, Perm State University, Perm, Russia (S.L. Esyunin); ZMUM — Zoological Museum of the Moscow State University, Russia (K.G. Mikhailov); ZMTU — Zoological Museum of the Turku State University, Finland (S. Koponen & M. Saaristo); ZISP — Zoological Institute, St. Petersburg, Russia (V.I. Ovtsharenko).

The following abbreviations have been used in the figures and text: ap. — apical; d. — dorsal; Fm. — femur; Mt. — metatarsus; pr. — prolateral; Pt. — patella; rt. — retrolateral; S — synonymized; T — transferred; Tb. — tibia; v. — ventral. Names of some collectors are abbreviated as follows: A.F. — Mr. A.A. Fedorov; A.Z. — Dr. A.A. Zyuzin; D.L. — Dr. D.V. Logunov; O.L. — Mr. O.V. Lyakhov; P.D. — Dr. P.M. Dunin; S.I. — Mr. S.I. Ibraev; S.O. — Mr. S.V. Ovtchinnikov; S.Z. — Mr. S.L. Zonstein; Y.M. — Dr. Y.M. Marusik; V.D. — Dr. V.V. Dubatolov; V.O. — Dr. V.I. Ovtsharenko. For leg spination the system adopted is that used by Ono [1988]. The sequence of leg segments in measurement data is as follows: femur + patella + tibia + metatarsus + tarsus. All measurements are in mm.

Survey of species

CHALCOSCIRTUS BERTKAU, 1880

Subgenus *Chalcoscirtus* (Bertkau, 1880)

The *infimus* species group

Chalcoscirtus (s. str.) *brevicymbialis* Wunderlich, 1980

Figs 12, 13, 28, 29, Map 3.

Chalcoscirtus brevicymbialis Wunderlich, 1980: 355–358, ff. 1–9 (σ°) holotype, in Senckenberg Museum, Frankfurt/M., not re-examined.

Chalcoscirtus infimus (Simon, 1868): Miller, 1971: 138, t.20, ff.25–26 (non *infimus* Simon, 1868).

Chalcoscirtus ?infimus: Prószyński, 1976: 185, ff. 354, 359, 360.

Chalcoscirtus pseudoinfimus Ovtsharenko, 1978: Marusik, 1990: 51 (with *C. pseudoinfimus*).

MATERIAL RUSSIA: 1 σ° , 1 ♀ (ISE), Novosibirsk Area, 20–25 km SW of Karasuk, 6.06.1989, V.P. Pekin; 2 $\sigma^{\circ}\sigma^{\circ}$ (PSU), 1 σ° (ISE), Orenburg Area, Kuvandyk Distr., near Aituar, 17.05.1996–24.05.1997, S.L. Esyunin & N.S. Mazura; 1 ♀ (ISE), Bashkortostan (= Bashkiria), Baimik Distr., Beksshevo, 2.08.1987, V.E. Efimik. — KAZAKHSTAN: 1 σ° (ZMUM), Almaty Area, near Kapchagai, 28.10.1988, A.Z.

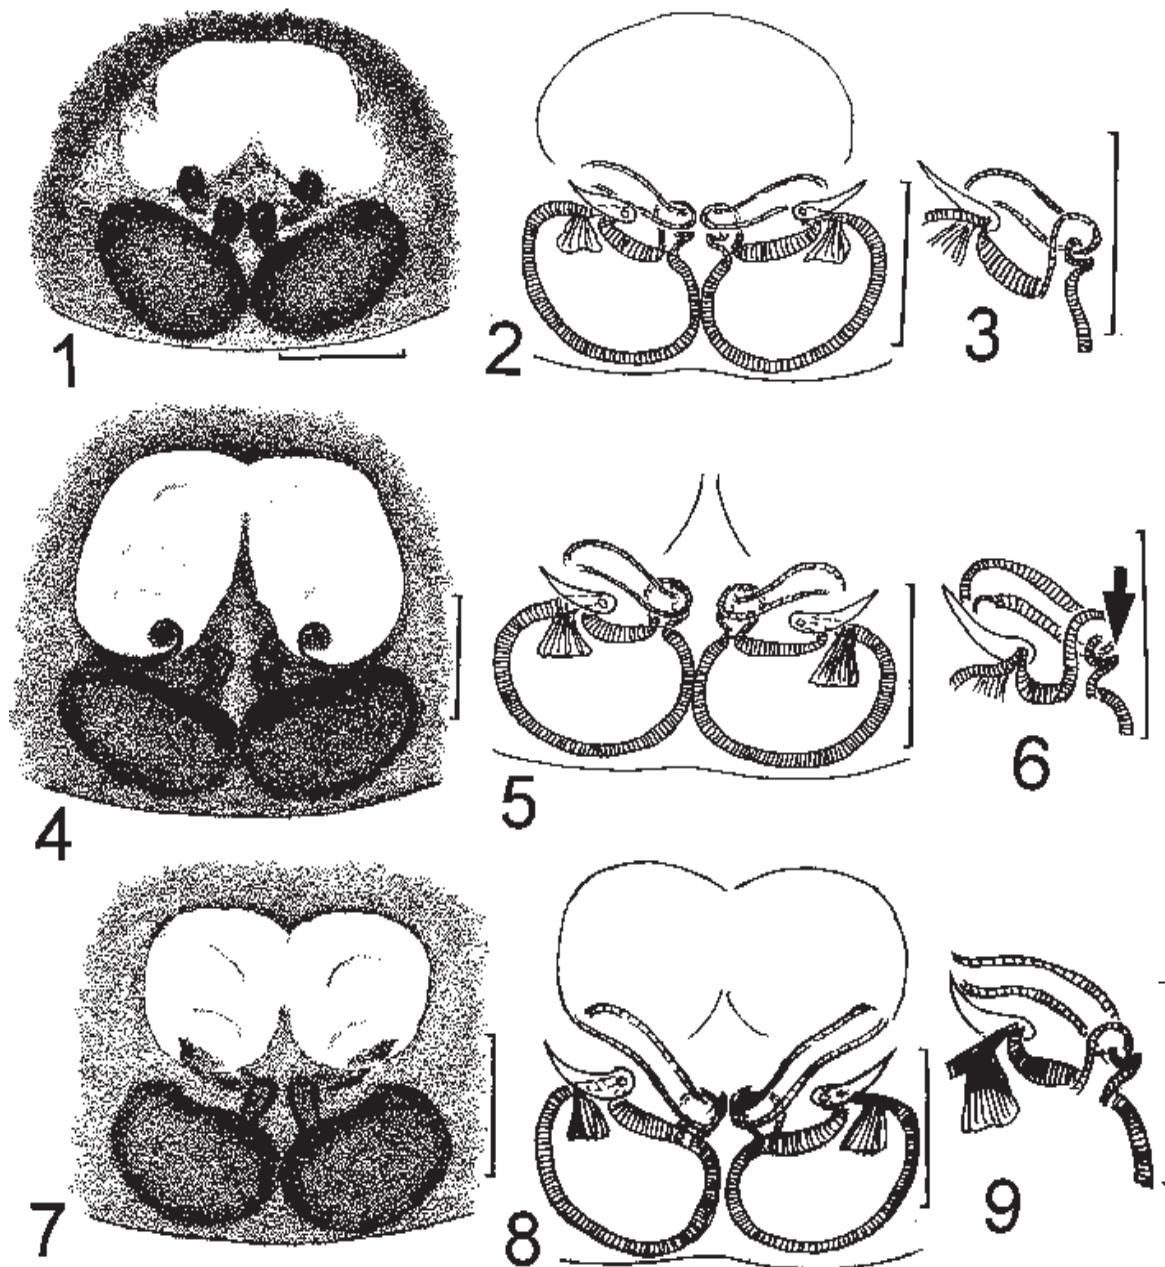

Comparative material. AUSTRIA: 4 ♀♀ (IZW), Annlinger, W. Kulczyński.

DIAGNOSIS. This species is most closely related to *C. pseudoinfimus* Ovtsharenko, 1978. Females differ in the absence of well-marked lips of the epigyne (cf. Figs 12 and 10) and the visibly smaller size of the receptacles (cf. Figs 13 and 11). Males differ in the smaller size and proportions of the tegulum, the shape of the embolus (cf. Figs 28 and 26) and the structure of the tibial apophysis (cf. Figs 29 and 27).

DISTRIBUTION. This is a Euro-Siberian subboreal species distributed from Austria in the west to the Novosibirsk Area in the east, with the Almaty Area of Kazakhstan being the southernmost periphery of the species' range [Wunderlich, 1980; current data] (Map. 3).

HABITAT. In W-Siberia, this species has been collected in meadow steppe (Novosibirsk Area) and stony steppe biotopes (Orenburg Area).

DESCRIPTION. See Wunderlich [1980].

Figs 1–9. Female genitalia of *Chalcoscirtus infimus* (1–3 from Cogoleto, Italy; 4–6 from Zeravshansky Mt. Range, Uzbekistan; 7–9 from Izmir, Turkey): 1, 4, 7 — epigyne; 2, 5, 8 — spermathecae, dorsal view; 3, 6, 9 — insemination duct, ventral view. Scale: 0.1 mm.

Рис. 1–9. Гениталии самок *Chalcoscirtus infimus* (1–3 из Коголето (Италия); 4–6 из Зеравшанского хребта (Узбекистан); 7–9 из Измира (Турция)): 1, 4, 7 — эпигина; 2, 5, 8 — сперматеки, дорзально; 3, 6, 9 — оплодотворительные канальцы, вентрально. Масштаб: 0,1 мм.

Chalcoscirtus (s. str.) *charynensis* sp.n.

Figs 20, 21, Map 8.

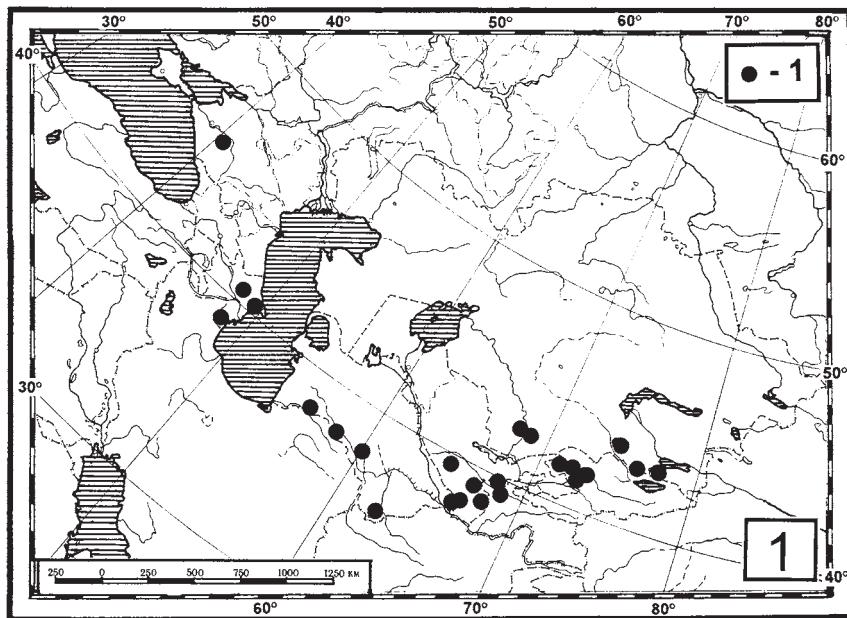

Holotype ♀ (ISE), Kazakhstan, Almaty Area, Chilik Distr., ca 1.5 km W of Charyn Canyon, Toraigyr Mts., 21.04.1990, C.K. Tarabaev & A.F.

DIAGNOSIS. This species is most closely related to *C. molo* Marusik, 1991, which is also known from the female only, but it can be easily separated by the position of the copulatory openings (visible in *C. charynensis* sp.n. vs.

invisible in *C. molo*; cf. Figs 20 and 21) and the size and proportions of the spermathecae (cf. Figs 21 and 23).

DISTRIBUTION. The type locality only (Map 8).

DESCRIPTION. FEMALE. Measurements. Carapace 1.20 long, 0.78 wide, 0.45 high at PLE. Ocular area 0.56 long, 0.70 wide anteriorly and 0.68 wide posteriorly. Diameter of AME 0.21. Abdomen 1.38 long, 0.98 wide. Cheliceral length 0.38. Clypeal height 0.05. Length of leg segments: leg I — 0.58 + 0.45 + 0.35 + 0.28 + 0.20; leg II — 0.53 + 0.30 + 0.30 + 0.27 + 0.30; leg III — 0.60 +

Map 1. Distribution of *Chalcoscirtus infimus* in Central Asia and the Caucasus.

Карта 1. Распространение *Chalcoscirtus infimus* в Средней Азии и на Кавказе.

$0.40 + 0.35 + 0.35 + 0.23$; leg IV — $0.70 + 0.38 + 0.49 + 0.45 + 0.28$. Leg spination. Leg I: Tb v. 1-2-2ap.; Mt v. 2-2ap. Leg II: Tb v. 1-2ap.; Mt v. 2-2ap. Leg III: Tb v. 1-0; Mt pr. and rt. 2 ap., v. 2-2ap. Leg IV: Tb v. 0-1-0; Mt pr. and rt. 2 ap., v. 1-2ap. Coloration. Carapace dark brown, shining. Eye field black, with metallic shining tint. Clypeus brown, hairless. Sternum, maxillae, labium and chelicerae light brown. Abdomen monochromously grey-brown. Book-lung covers and spinnerets brown. All legs brown with yellowish stains. Epigyne and spermathecae as in Figs 20, 21.

NAME. The species is named after the type locality, Charyn Canyon in the Almaty Area of Kazakhstan.

Chalcoscirtus(s. str.) *grishkanae* Marusik, 1988

Chalcoscirtus grishkanae Marusik, 1988: 1475, ff. 4.2–5 (♂ holotype, in ZMUM, re-examined).

Chalcoscirtus grishkanae: Marusik, 1991a: 30; Danilov & Logunov, 1993: 28; Mikhailov, 1996: 130; 1997: 208.

MATERIAL. See Marusik [1988] and Danilov & Logunov [1993].

DIAGNOSIS. See Marusik [1988, 1991a].

DISTRIBUTION. The species has so far been recorded in the Magadan Area (the upper reaches of Kolyma River) and Transbaikalia (Sokhondo Nature Reserve) [Marusik, 1988; Danilov & Logunov, 1993].

DESCRIPTION. See Marusik [1988].

Chalcoscirtus(s.str.) *infimus* (Simon, 1868)

Figs 1–9, 24, 25, 32–35, Map 1.

Euophris thorelli asiatica Charitonov, 1951: 214–215, f. 6 (♀ holotype, in PSU, re-examined). **Syn.n.**

Chalcoscirtus infimus: Nenilin, 1984b: 134; 1985: 130, 132; Kuznetsov & Fet, 1986: 61; Marusik, 1990: 51, ff. 1–3; Mikhailov & Fet, 1994: 516; Wesolowska, 1996: 26; Mikhailov, 1996: 130; 1997: 208.

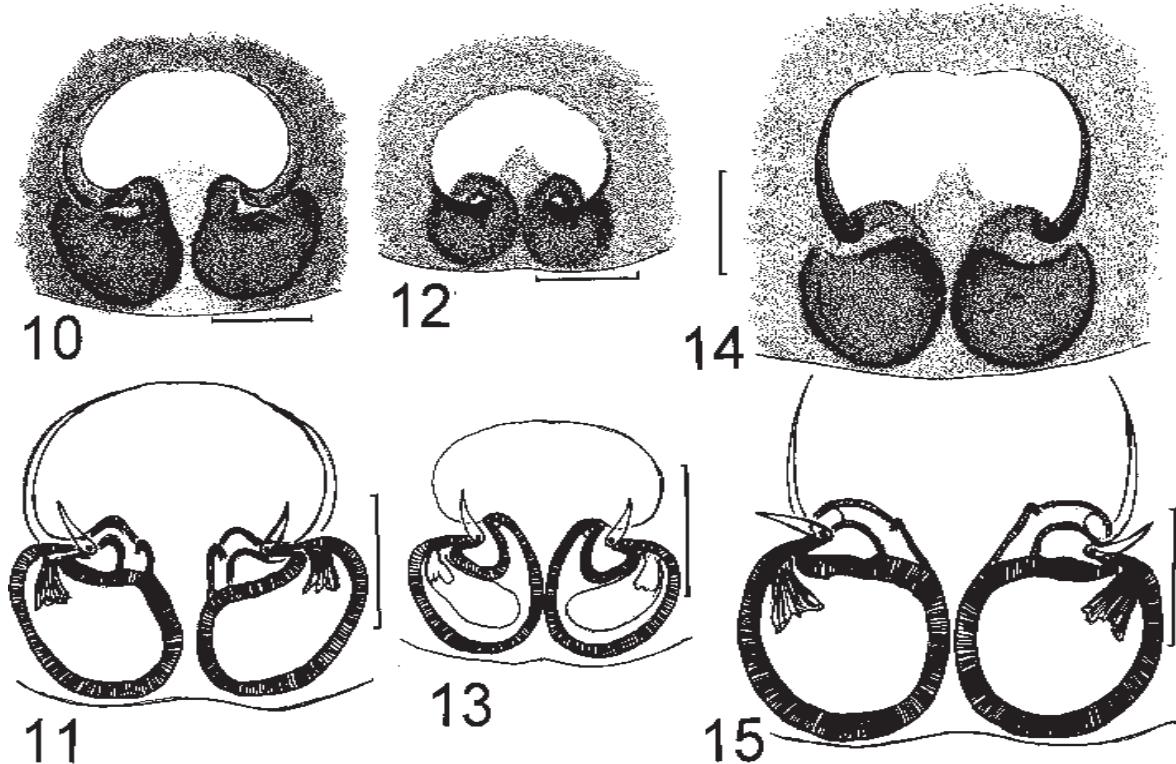

Chalcoscirtus asiaticus: Marusik, 1990: 53–54, ff. 3–5 [pro parte, ♀♂ only]; Mikhailov, 1996: 130; 1997: 208.

Chalcoscirtus pauper Wesołowska, 1996: 26–27, ff. 10C, D (♀ holotype, in ZISP, re-examined). **Syn.n.**

Chalcoscirtus pauper: Mikhailov, 1996: 130; 1997: 209.

MATERIAL. Yellow morph (true *C. infimus*): RUSSIA: 1 ♂ (ZISP), Krasnodar Prov., near Maikop, 9.06.1976, V.O. — AZERBAIJAN: 1 ♂ (ISE), Lerik Distr., Gosmalyan, 1400 m a.s.l., 14.05.1985, P.D.; 1 ♂ (ZMUM), Baky, 19–21.05.1981, S.I. Golovatch; 3 ♂♂ (ISE), same locality, 14.05.1977–14.06.1981, P.D.; 1 ♂ (ISE), Turianchay Nature Reserve, 13.05.1986, P.D. — KAZAKHSTAN: 1 ♂ (ISE), S-Kazakhstan Area, Arys, 7.05.1988, D.L.; 1 ♂ (ISE), Almaty Area, Zhambul Distr., Mts. north of Otar, 11.05.1988, C.K. Tarabaev & A.Z.; 1 ♂ (ISE), same area, Chilik Distr., Sogety Valley, near Kokpek, 29.05.1988, A.Z.; 1 ♂ (ISE), Ili Distr., 60th km of highway Almaty-Kapchagai, 26.05.1988, A.Z. — KYRGYZSTAN: 1 ♂ (ISE), ca 13 km N of Tash-Kumyr, Kara-Tyt (41°28'N, 72°14'E), 18–23.05.1994, D.A. Milko; 2 ♂♂ (ISE), Baubashata Mt. Range, Yarodar, 8.06.1981, S.Z. — TURKMENISTAN: 1 ♂ (ISE), near Murgab, 8.04.1993, A.Z.; 1 ♂ (ISE), ca 8 km N of Guzhgy [= Kushkaj], near Morgunovka, 9–19.04.1993, D.L.; 1 ♀ (ZISP, holotype of *C. pauper*), SW-Kopetdag Mts., Monzhukly, 1,000 m a.s.l., 3–17.05.1985, T. Lukarevskaya; 1 ♂ (ISE), same, S-Syunt Plateau, Kalaligez, 3.05.1982, V.Ya. Fet; 3 ♀ (ISE), same locality, middle reaches of Sumbar River, 7.06.1982, V.Ya. Fet; 1 ♂, 1 ♀ (FSCA), near Garry-Gala [=Kara-Kala], 4.05.1987, A.Z.; 1 ♂ (ISE), same locality, 20.04.1985, S.Z.; 1 ♂ (ZMUM), same locality, 25.04.1989, K.G. Mikhailov; 1 ♂ (ISE), C-Kopetdag Mts., near Firyuza, 4.05.1987, V.D.; 2 ♂♂ (ISE), same locality, 17–24.03.1979, G.T. Kuznetsov; 3 ♂♂ (ISE), same, Kopetdag Nature Reserve, ca 12 km SE of Annau, 15–18.05.1987, V.D. — TAJIKISTAN: 1 ♂ (ISE), Sanglok Mt. Range, near Sebistan, 3.05.1991, S.O. — UZBEKISTAN: 4 ♂♂ (ISE), Surkhandarya Area, 40–47 km SE of Denau, Babatagh Mt. Range, 5–13.05.1994, A.Z.; 2 ♂♂ (ISE), ca 7 km N of Kitab, Zeravshansky Mt. Range, 800 m a.s.l., 26.04.1993, D.L. & A.Z.

Black morph (*C. asiaticus*): TAJIKISTAN: 1 ♀ (PSU, holotype of *E. thorelli asiatica*), Hissar Mt. Range, Kondara Canyon, 1,100–1,200 m a.s.l., 29.07.1945, V. Gussakovskiy. — UZBEKISTAN: 5 ♀♀ (ISE), Babatagh Mt. Range, near Ak-Mechet, 3.05.1994, S.O.; 1 ♀ (ISE), Samarkand Area, Sovetobad Distr., Zeravshansky Mt. Range, ca 16 km upper of Dzhan, near Chon-Kaimysh, 9.06.1991, E.E. Koptykbaev & A.Z.; 1 ♀ (ZISP), Surkhandarya Area, Kuhitangtau Mt. Range, Kampyr-Tepa, 19.05.1983, A.B. Nenilin; 1 ♀ (ZMUM), ca 20 km S of Kagan, "Dzheiranii Pitomnik", summer 1995, coll. ? — KYRGYZSTAN: 1 ♀ (ZMUM), Talass Area, Toktogul Distr., ca 25 km NE of Kara-Kul, Kek-Bel Pass, 1,500 m a.s.l., 27–28.06.1992, A.Z. & A.F.; 1 ♀ (ISE), Dzhalal-Abad Area, Dzhan-Dzhal Distr., near Kyzylzhar, 22.06.1992, A.F. & A.Z. — KAZAKHSTAN: 1 ♂, 1 ♀ (ISE), S-Kazakhstan Area, near Arys, 21.05.1987–2.06.1990, D.L.; 1 ♀ (ISE), same area, Arys Distr.,

Figs 10–15. Female genitalia of *Chalcoscirtus pseudoinfimus* (10, 11 from type locality), *C. brevicymbialis* (12, 13 from Anniger, Austria) and *C. nenilini* (14, 15 from Kaindy, Kyrgyzstan): 10, 12, 14 — epigyne; 11, 13, 15 — spermathecae, dorsal view. Scale: 0.1 mm.

Рис. 10–15. Гениталии самок *Chalcoscirtus pseudoinfimus* (10, 11 из типового локалитета), *C. brevicymbialis* (12, 13 из Аннингера (Австрия)) и *C. nenilini* (14, 15 из Кайнды (Кыргызстан)): 10, 12, 14 — эпигина; 11, 13, 15 — сперматеки, дорзально. Масштаб: 0,1 мм.

Kyzylkum Desert, near Baimakhan, 24.05.1993, A.Z.; 1 ♀ (ISE), 1 ♀ (ZMUM), Zhambyl Area, Krasnogorsk Distr., ca 17 km NW of Kenen, Chu-Ili Mts., 14–15.06.1990, A.F. & A.Z.; 1 ♀ (ISE), ca 7 km E of Khantau, Khattau Mts., 31.05–1.06.1996, A.V. Gromov. — TURKMENISTAN: 1 ♀ (ZISP), SW-Kopetdag, near Garry-Gala [=Kara-Kala], 4–8.06.1982, N. Ustinaova.

Comparative material: TURKEY: 2 ♂♂, 2 ♀♀ (ZMTU), Izmir Distr., Yamanlar Dagi, 1,100 m a.s.l., 24–25.05.1973, P. Lehtinen & F. Önder. — ITALY: 3 ♂♂, 3 ♀♀ (IZW), Cogoleto, 400 m a.s.l., 29.05.1966, M.&J. Prószyński; 1 ♂ (ZMTU), Corsica, Col de San Bastiano, 22.05.1972, P. Lehtinen.

DIAGNOSIS. *C. infimus* is somewhat disjunct from other congeners of the *infimus*-group and differs in the well-marked ducts of the accessory glands, which are seen in dorsal view as “outgrowths” of the insemination duct walls (arrowed in Figs 3, 6, 9), and the thinnest and longest embolus (Figs 24, 32, 34).

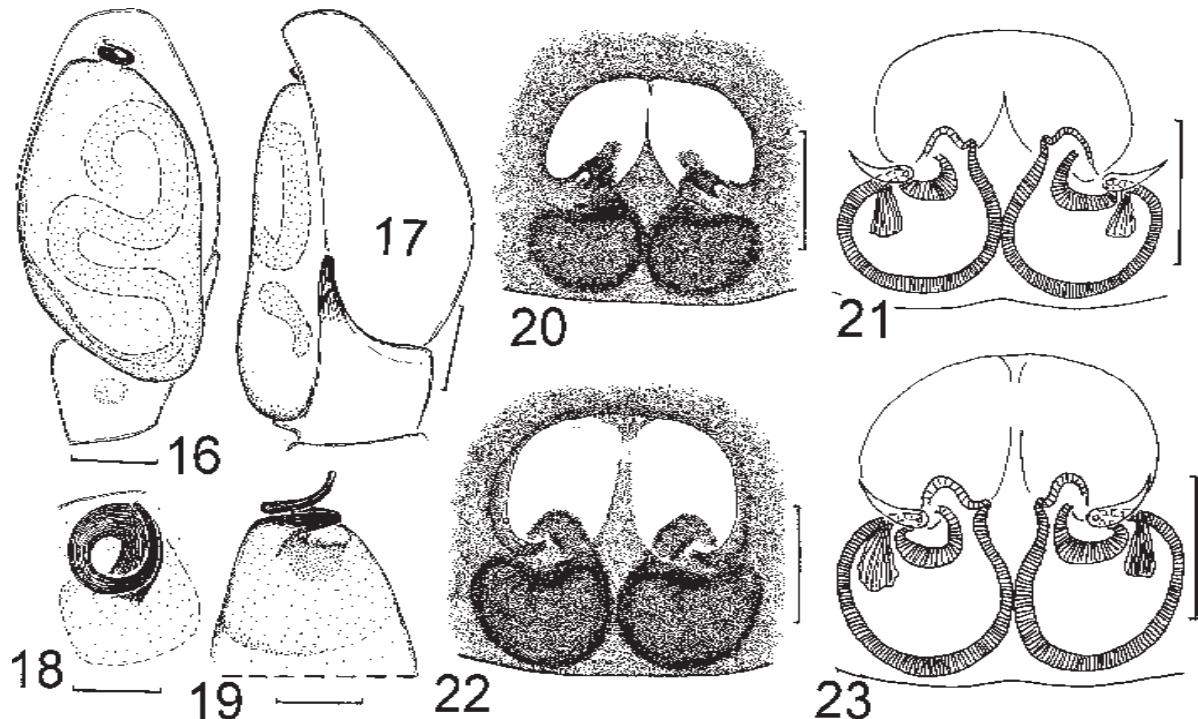

DISTRIBUTION. This seems to be a Mediterranean-Central Asian species, with its localities in Central Asia and the Caucasus being shown in Map 1.

NOTES. Based on Andreeva's figure alone [Andreeva, 1976: fig. 130, ♀], we have concluded that apparently she did not deal with *C. infimus* as stated [repeated by Andreeva, 1975 and Nenlin, 1984a], but with an unknown species. The problem is, a restudy of pertinent material is necessary.

There are two morphs of both females and males amongst Central Asian samples of *C. infimus*. Females differ in leg coloration. This has allowed to sort out all material studied into two groups, or morphs (see above): yellow (females with completely yellow legs) and black (those with dark grey/black legs). However, females from

Italy (see comparative material) show all legs with brown femora and yellow remaining segments. The genitalia of both colour morphs show no clear differences (see Figs 1–9), although yellow-legged females sometimes have a poorly developed, visible median septum of the epigyne (Fig. 1). Males of *C. infimus* differ in size and shape of the tegulum (cf. Figs 32, 33 and 34, 35). Although males with a narrower tegulum (Fig. 32) are more often found together with yellow-legged females, it seems impossible to prove they match each other. It has also been impossible to match black-legged females and males with a rounded tegulum (Fig. 34), as no black-legged females have ever been collected together with males. Moreover, we have even been unable to clearly sort out the males into two groups in agreement with bulb structure, as all intermediate forms appear to exist, sometimes even in the same sample. Therefore, we are bound to consider *C. infimus* as a quite variable species as regards both coloration and the structure of the genitalia.

Based on this, we advance the synonymy of both *Euophrys thorelli asiatica* (= *Chalcoscirtus asiaticus*) and *C. pauper* with *C. infimus*. Both species have hitherto been known from single female holotypes only. Of them, the former (*E. t. asiatica*) belongs to the black-legged morph, while the latter (*C. pauper*) to the yellow-legged one. The males of *C. asiaticus* have been mistaken by Marusik [1990], being in fact those of *C. paraansobicus* Marusik, 1990 (Marusik's specimens re-examined). The probably wrong synonymy of *C. ansobicus* Andreeva, 1976 with *C. asiaticus* will be discussed below (see “Diagnosis” under *C. ansobicus*).

Figs 16–23. Genitalia of *Chalcoscirtus michailovi* sp.n. (16–19, holotype), *C. charynensis* sp.n. (20, 21, holotype) and *C. molo* (22, 23, paratype from the type locality): 16, 17 — male palp, ventral and prolateral views; 18, 19 — embolic division, apical and ventral views; 20, 22 — epigyne; 21, 23 — spermathecae. Scale: 0.1 mm.

Рис. 16–23. Гениталии *Chalcoscirtus michailovi* сп.н. (16–19, голотип), *C. charynensis* сп.н. (20, 21, голотип) и *C. molo* (22, 23, паратип из типового локалитета): 16, 17 — пальпа самца, вентрально и пролатерально; 18, 19 — эмболярный отдел, апикально и вентрально; 20, 22 — эпигина; 21, 23 — сперматеки. Масштаб: 0,1 мм.

Chalcoscirtus (s.str.) *molo* Marusik, 1991 Figs 22, 23, Map 8.

Chalcoscirtus molo Marusik, 1991b: 22–23, ff. 3–4 (♀ holotype, in ZMUM, re-examined).

Chalcoscirtus molo: Mikhailov, 1996: 130; 1997: 208.

MATERIAL. 2 ♀♀ (ZMUM, holotype and paratype), Kyrgyzstan, Terskei-Alatoo Mt. Range, Molo, 3,100 m a.s.l., 15.07.1983, S.O.

DIAGNOSIS. See "Diagnosis" under *C. charynensis* and *C. pseudoinfimus*.

DISTRIBUTION. The type locality only (Map 8).

DESCRIPTION. See Marusik [1991b].

Chalcoscirtus (s.str.) *nenilini* Marusik, 1990 Figs 14, 15, 30, 31, Map 7.

Chalcoscirtus nenilini Marusik, 1990: 52–53, f. 2 (♂ holotype, in ZMUM, re-examined).

Chalcoscirtus nenilini: Mikhailov, 1996: 130; 1997: 208.

MATERIAL. KYRGYZSTAN: 1 ♀ (ISE), foothills of Kirghizsky Mt. Range, Malinovoe Canyon, 1,500 m a.s.l., 10.07.1983, S.O.; 1 ♂ (ISE), W part of Inylchektau (?) Mt. Range, Sary-Dzhaz, 18–19.07.1993, D.A. Milko.

DIAGNOSIS. *C. nenilini* is the largest member of the *infimus*-group (cf. scales of Figs 10–15 and 24–31) and it can be easily distinguished by genitalic structure, i.e. the hook-shaped embolus in males (Fig. 30), the heavily sclerotized epigynal lips and the rounded spermathecae in females (Figs 14, 15).

DISTRIBUTION. Kyrgyzstan (Map 7).

DESCRIPTION. See Marusik [1990].

Chalcoscirtus (s.str.) *pseudoinfimus* Ovtsharenko, 1978 Figs 10, 11, 26, 27, Map 4.

Chalcoscirtus pseudoinfimus Ovtsharenko, 1978: 685–686, ff. 4–7 (♀ holotype, in ZISP, re-examined).

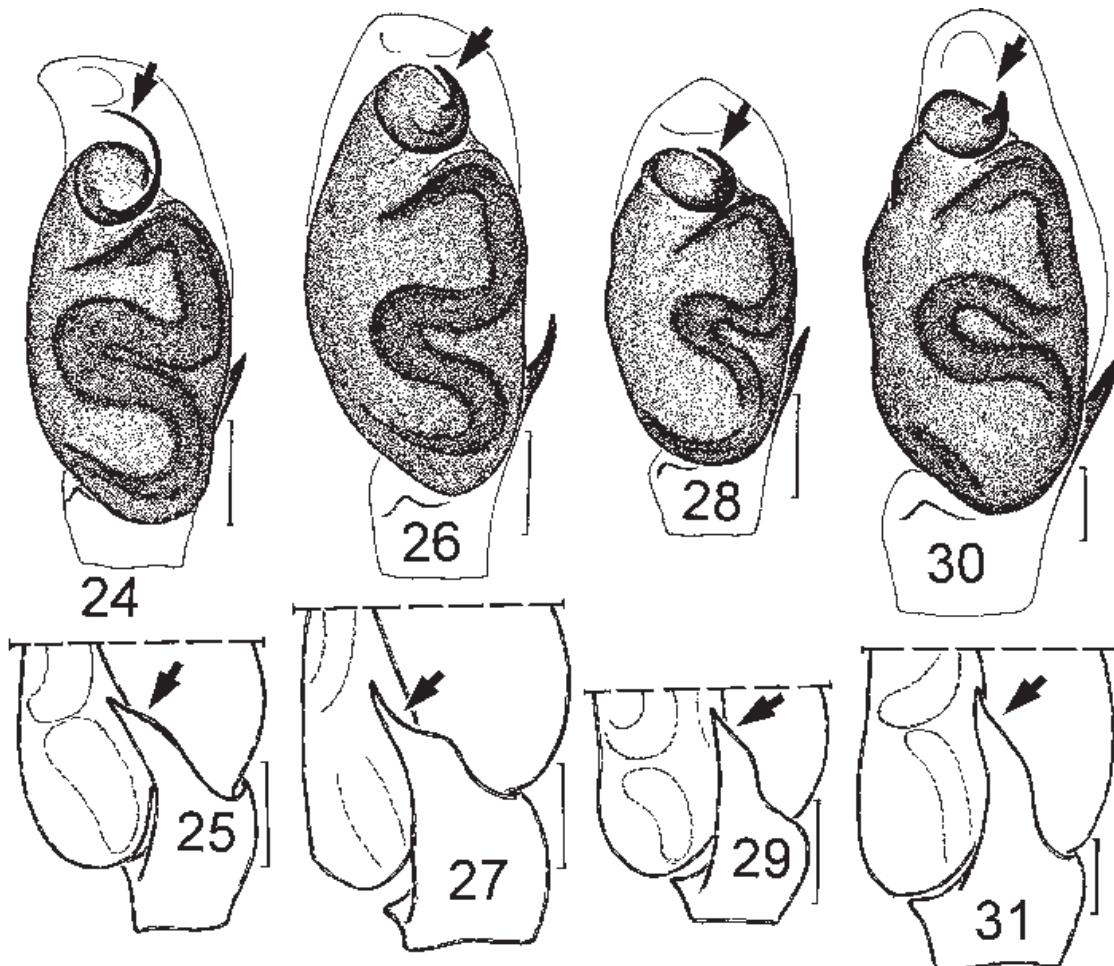

Chalcoscirtus pseudoinfimus: Nenlin, 1985: 130; Marusik, 1990: 51–52, ff. 4–7; Mikhailov, 1996: 130; 1997: 209.

MATERIAL. GEORGIA: 2 ♂♂ (ISE), 2 ♀♀ (ISE), 1 ♂, 3 ♀♀ (ZISP), E-Georgia, Lagodekhi Nature Reserve, 2,700–2,800 m a.s.l., 23.06–3.07.1982, Y.M.; 2 ♂♂ (ISE), RUSSIA: Caucasus Major, Krasnodar Prov., Kavkazsky (= Caucasian) Nature Reserve, environs of Krasnaya Polyna, Mt. Pseashko, 2,800–3,000 m a.s.l., 22–27.07.1975, V.O.; 1 ♀ (ZISP, holotype?), Kabardino-Balkarian Republic, Mt. Elbrus, 3,300 m a.s.l., 2.07.1976, V.O.; 2 ♂♂ (ZISP), 1 ♂ (ISE), same locality and date.

DIAGNOSIS. The species belongs to the *infimus*-group and seems to be the closest to *C. brevicymbialis* and *C. molo*. For differences from the former species see "Diagnosis" above under *C. brevicymbialis*. Females of *C. pseudoinfimus* are especially similar to those of *C. molo* both in size and in the structure of the genitalia (cf. Figs 10–11 and 22–23) and neither can clearly be distinguished. At present, we consider both species separate, as the former seems to be restricted to high elevations of the Caucasus, while the latter to high elevations of the Tian Shan. Males are necessary to provide more detailed diagnoses of these species.

DISTRIBUTION. The Caucasus Major Mt. Range (high elevations only) (Map 2).

DESCRIPTION. See Ovtsharenko [1978].

Figs 24–31. Male palpi of *Chalcoscirtus infimus* (24, 25, from Babatagh Mt. Range, Uzbekistan), *C. pseudoinfimus* (26, 27, from the type locality), *C. brevicymbialis* (28–29, from Kapchagai, Almaty Area) and *C. nenilini* (30, 31, from Sary-Dzhaz, Kyrgyzstan): 24, 26, 28, 30 — ventral view; 25, 27, 29, 31 — prolateral view. Scale: 0.1 mm. Taxonomically important details arrowed.

Рис. 24–31. Пальпы самцов *Chalcoscirtus infimus* (24, 25 из хребта Бабатаг (Узбекистан)), *C. pseudoinfimus* (26, 27, из типового локалитета), *C. brevicymbialis* (28, 29 из Капчагая (Алматинская область)) и *C. nenilini* (30, 31 из Сары-Джаза (Кыргызстан)): 24, 26, 28, 30 — вентрально; 25, 27, 29, 31 — пролатерально. Масштаб: 0,1 мм. Стрелками помечены таксономически важные детали.

The karakurt species group

Chalcoscirtus (s.str.) *iranicus* sp.n. Figs 42, 43, Map 5.

Holotype ♀ (ISE), Iran, Tehran, 06.1859, coll. E. Keyserling.

DIAGNOSIS. The new species is most similar to *C. karakurt* but it can easily be separated by the longer and coiled insemination ducts (cf. Figs 42, 43 and 40, 41).

DISTRIBUTION. The type locality only (Map 5).

DESCRIPTION. FEMALE. Measurements. Carapace 1.60 long, 1.10 wide, 0.63 high at PLE. Ocular area 0.78 long, 0.94 wide anteriorly and 0.90 wide posteriorly. Diameter of AME 0.15. Abdomen destroyed and cannot be measured. Cheliceral length 0.50. Clypeus not marked. Length of leg segments: leg I — 0.88 + 0.51 + 0.55 + 0.43 + 0.30; leg II absent; leg III — 1.00 + 0.50 + 0.60 + 0.53 + 0.33; leg IV — 1.05 + 0.50 + 0.78 + 0.63 + 0.38. Legs strongly shabby, leg spination cannot be studied. Coloration. Carapace brown, with a dark brown eye field and black around eyes. Sternum, maxillae, labium and cheli-

cerae light brown. Abdomen yellowish-brownish. Dorsal colour pattern expressed but cannot be studied because of destroyed abdomen. Book-lung covers and spinnerets yellow, tinged grey. All legs and palpi yellow. Epigyne and spermathecae as in Figs 42, 43.

NAME. The species is named after the terra typica, Iran.

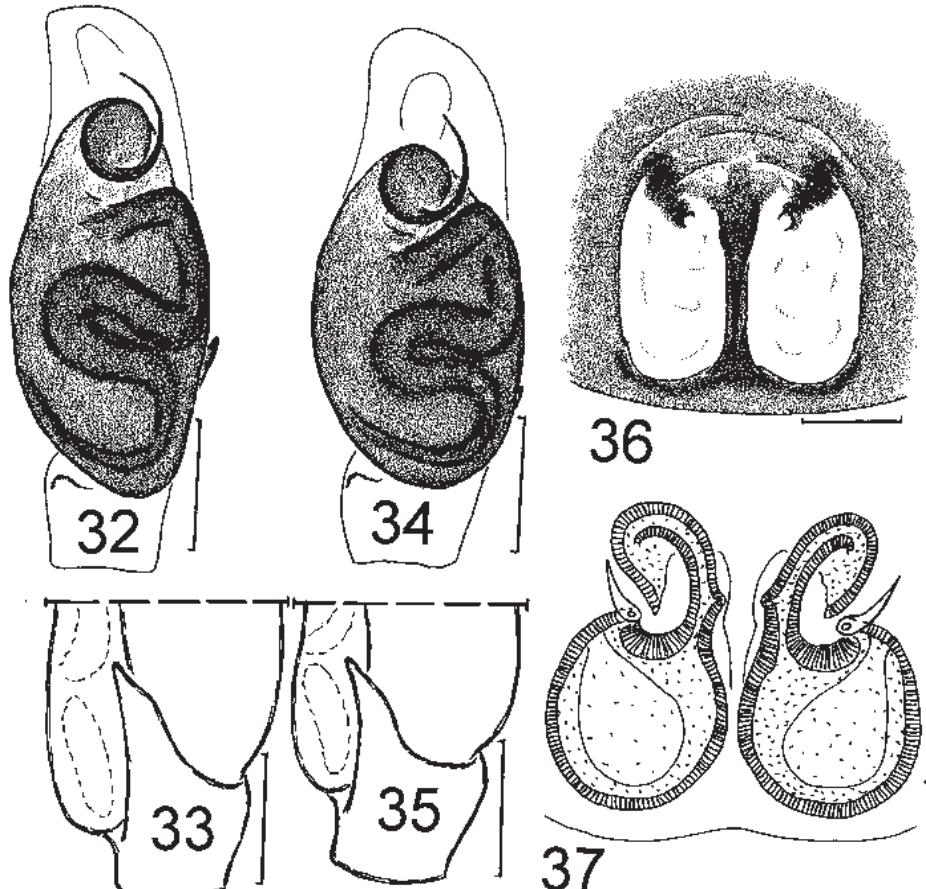

Chalcoscirtus (s.str.) *karakurt* Marusik, 1991 Figs 38–41, Map 7.

Chalcoscirtus karakurt Marusik, 1991a: 19, ff. 1.1–5 (♂ holotype, in ZMUM, re-examined).

Abramov; 1 ♀ (ZISP), Malii Balkhan Mt.

Range, 14.05.1984, V.Ya. Fet; 2 ♀♀ (ZISP), SE-Karakumy Desert, Repetek Nature Reserve, 13.05.1982, V.I. Krivokhatsky; 1 ♀ (ISE), same locality, 18.04.1993, S.O. — KYRGYZSTAN: 1 ♀ (ZISP), Chu River Valley, Tokmak, 20.05.1979, S.Z. — IRAN: 1 ♂ (PSU), Kerman, April 59, Keyserling et Bienart, 1869".

DIAGNOSIS. See "Diagnosis" under both *C. iranicus* sp.n. and *C. michailovi* sp.n.

DISTRIBUTION. This is a typical Turanian lowland species (Map 7).

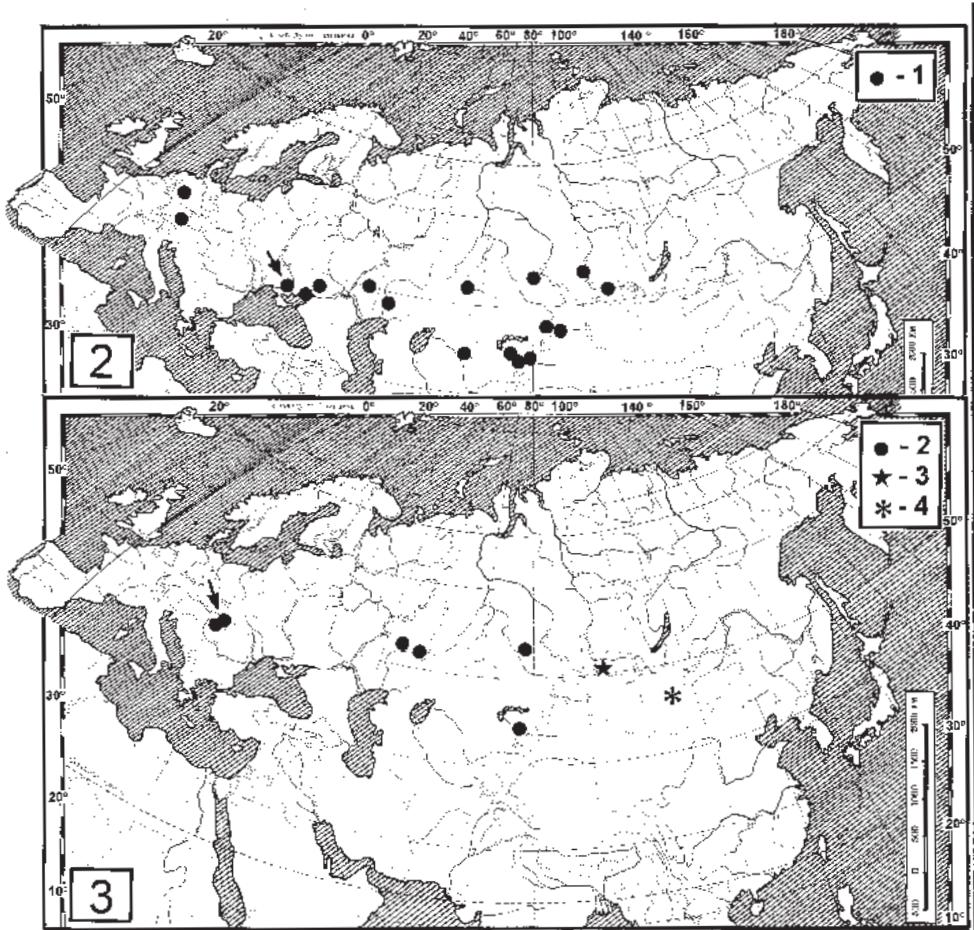

NOTE. Two kinds of *C. karakurt* females have been found during a survey of the collected material, of which most of the females but one display the genitalic structure as shown in Figs 40, 41, with the insemination ducts crossing the white epigynal "windows". Variation has turned out to be quite little. However, a female from the Repetek Reserve shows the genitalia with the insemination ducts running subparallel along the median septum (Figs 38, 39). The latter female is very likely to belong to a new species but, as both forms concerned are very close/similar, we postpone its description before more material, including that of males, has been collected.

DESCRIPTION. For males see Marusik [1991a], and for females see Marusik [1991a: sub *C. martensi parvulus*].

Chalcoscirtus (s.str.) *kirghizicus* Marusik, 1991
Map 8.

Chalcoscirtus kirghizicus Marusik, 1991b: 22, ff. 1–2 (♀ holotype, in ZMUM, re-examined).

Chalcoscirtus kirghizicus: Mikhailov, 1996: 130; 1997: 208.

MATERIAL. KYRGYZSTAN: 1 ♀ (ZMUM, holotype without epigyne), Lake Issyk-Kul, Tyup River Valley, Santash, 3,000 m a.s.l., 23.07.1983, S.O.

DIAGNOSIS. See "Diagnosis" below under *Chalcoscirtus* sp.

DISTRIBUTION. The type locality only (Map 8).

DESCRIPTION. See Marusik [1991b].

Chalcoscirtus (s.str.) *mikhailovi* sp.n.

Figs 16–19, Map 8.

Holotype ♂ (ISE), Kazakhstan, Almaty Area, Almaty Nature Reserve, 1,700 m a.s.l., 1.09.1983, Y.M.

Paratype: 1 ♂ (ZMUM), Turkmenistan, C-Kopetdag, ca 20 km S of Geok-Tepe, Mt. Dushak, 2,400–2,500 m a.s.l., 19.04.1989, K.G. Mikhailov.

DIAGNOSIS. The species is particularly similar to *C. karakurt* but differs in the smaller coil of the embolus, the dissimilar proportions of the tegulum, and the longer tibial apophysis [cf. Figs 16–19 and Marusik, 1991a: 1.1–5].

DISTRIBUTION. SE-Kazakhstan and Turkmenistan (Map 8).

DESCRIPTION. MALE. Measurements. Carapace 1.40 long, 0.93 wide and 0.53 high at PLE. Eye field 0.58 long, 0.78 wide anteriorly and 0.68 wide posteriorly. AME 0.25. Abdomen 1.58 long, 1.03 wide. Cheliceral length 0.45. Clypeal height 0.05. Length of the leg segments: leg I – 0.70 + 0.33 + 0.40 + 0.33 + 0.28; leg II – 0.63 + 0.35 + 0.36 + 0.33 + 0.28; leg III – 0.73 + 0.35 + 0.48 + 0.45 + 0.35; leg IV – 0.70 + 0.35 + 0.58 + 0.45 + 0.35. Leg

spination. Leg I: Tib. v. 1-2-2ap.; Mt. v. 2-2ap. Leg II: Tib. v. 1-1-1ap.; Mt. v. 2-2ap. Leg III: Tib. pr., rt. and v. 0-1-0; Mt. pr. and rt. 2ap., v. 2-0-2ap. Leg IV: Mt. 3ap. (this specimen is damaged and lacks spines on tibia IV). Coloration. Whole body monochromous: dark grey, almost black, iridescent dorsally, dark brown ventrally. Leg segments dark grey except for white tarsi. Dorsum with a large scutum. Palpal structure as in Figs 16–19.

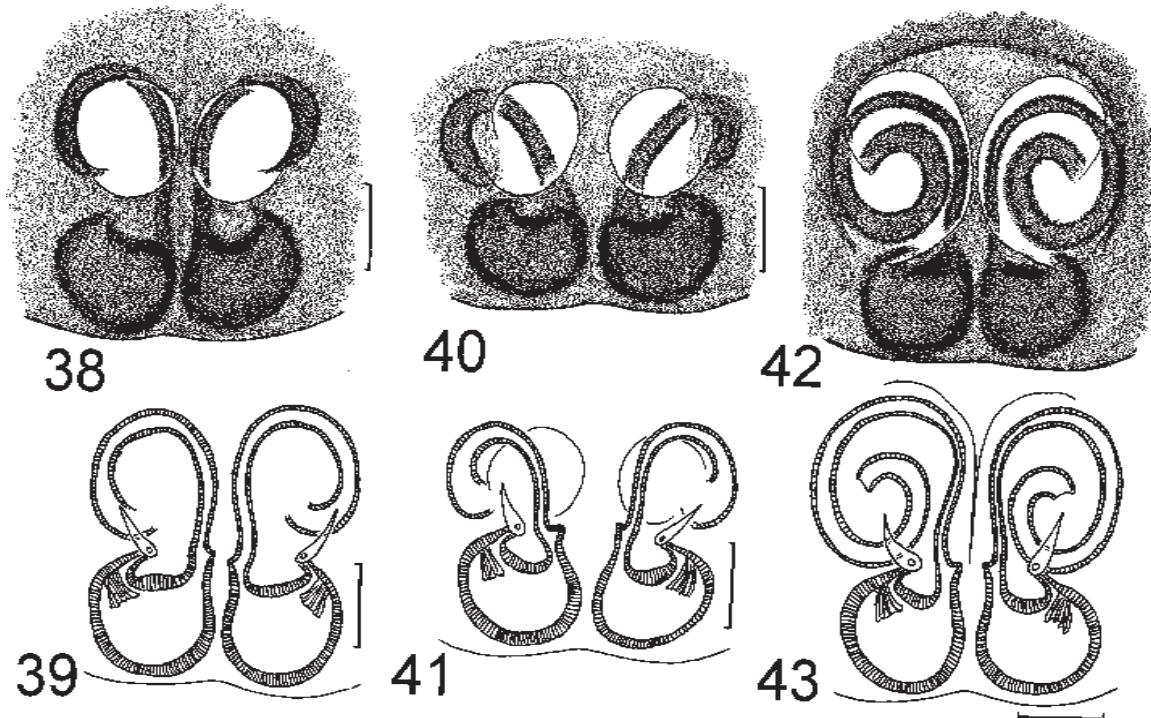

NAME. The species is gladly named after our friend and colleague, Dr. Kirill G. Mikhailov, arachnologist from ZMUM, Moscow, Russia.

Chalcoscirtus (s.str.) sp.

Figs 62, 63.

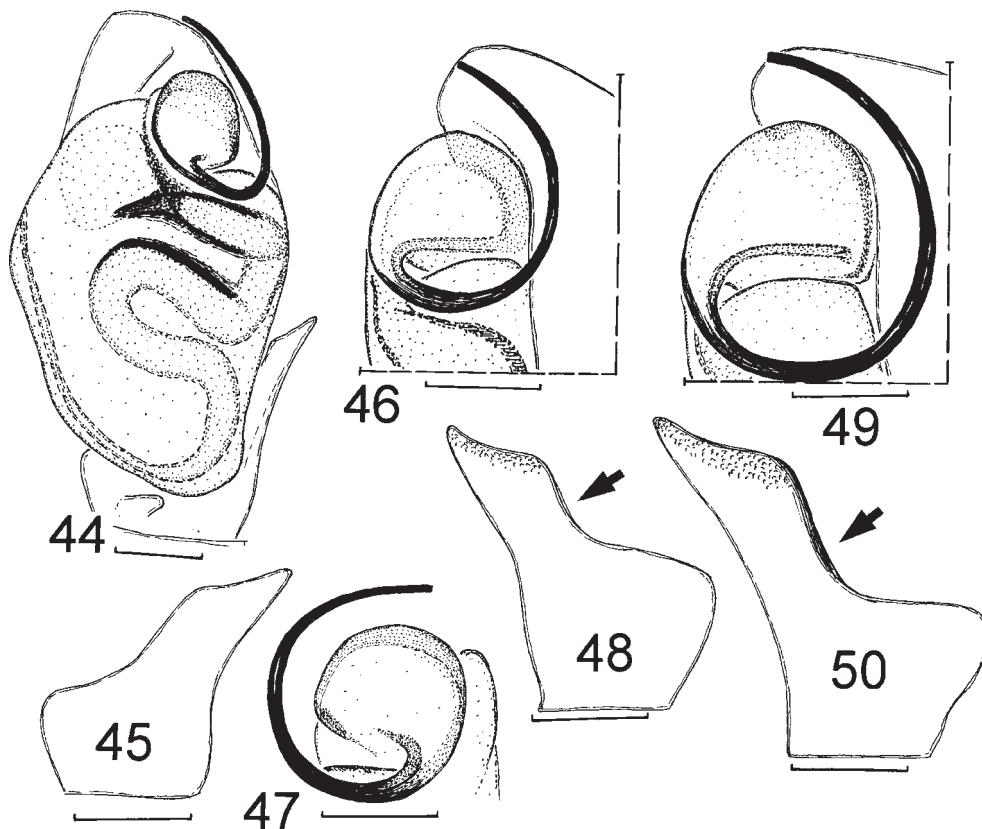

MATERIAL. KAZAKHSTAN: 1 ♀ (ISE), Taldy-Kurgan Area, Gvardeisk Distr., near Bakchit, 9.05.1992, A.F. & A.Z.

DIAGNOSIS. The genitalic structure of this species is quite similar to that of *C. kirghizicus* as shown by Marusik [1991b: figs 1–2] (cf. Figs 62, 63). However, a direct comparison of the genitalia of both females was impossible, as the genitalia of the holotype of *C. kirghizicus* had been lost during the original description (checked by DL). Despite this, we consider both species as separate, because the female of *Chalcoscirtus* sp. differs from that of *C. kirghizicus* in having a two times smaller body and metallic shining tint of the carapace. Furthermore, *Chalcoscirtus* sp. is here assumed to probably represent female *C. mikhailovi* (see above), for it

Figs 38–43. Female genitalia of *Chalcoscirtus karakurt* (38–39 from Repetek, Turkmenistan, 40–41 from Kapchagai, Almaty Area) and *C. iranicus* sp.n. (42–43, holotype): 38, 40, 42 — epigyne; 39, 41, 43 — spermathecae. Scale: 0.1 mm.

Рис. 38–43. Гениталии самок *Chalcoscirtus karakurt* (38–39 из Репетека (Туркменистан), 40–41 из Капчагая (Алматинская область)) и *C. iranicus* sp.n. (42–43, голотип): 38, 40, 42 — эпигина; 39, 41, 43 — сперматеки. Масштаб: 0,1 мм.

Figs 44–50. Male palpi of *Chalcoscirtus nigritus* (44–45 from Hessen, Germany, 46–48 from Taganrog, Rostov-on-Don Area) and *C. tanasevichi* (49–50 from Zhambyl Area, Kazakhstan): 44 — male palp, ventral view; 46, 47, 49 — embolic division, prolateral view; 45, 48, 50 — tibial apophysis, prolateral view. Scale: 0.1 mm.

Рис. 44–50. Пальпы самцов *Chalcoscirtus nigritus* (44–45 из земли Гессен (Германия), 46–48 из Таганрога (Ростовская обл.)) и *C. tanasevichi* (49–50 из Жамбылской области (Казахстан)): 44 — палпса самца, вентрально; 46, 47, 49 — эмболярный отдел, пролатерально; 45, 48, 50 — голенный отросток, пролатерально. Масштаб: 0,1 мм.

Maps 4–5. Distribution of *Chalcoscirtus parvulus* (1), *C. pseudoinfimus* (2), *C. minutus* (3), *C. tanasevichi* (4) and *C. iranicus* sp.n. (5) in Central Asia and the Caucasus. Type localities arrowed.

Карты 4–5. Распространение *Chalcoscirtus parvulus* (1), *C. pseudoinfimus* (2), *C. minutus* (3), *C. tanasevichi* (4) и *C. iranicus* sp.n. (5) в Средней Азии и на Кавказе. Типовые локалитеты помечены стрелками.

shows the same pattern of the female genitalia as in other congeners of the *karakurt*-group and fits well the male size of *C. michailovi*. Unfortunately, there are no samples yet where males and females of *C. michailovi* have been collected together. So we delay a final conclusion concerning the assignment of *Chalcoscirtus* sp. before more specimens, including males, have become available for study.

DISTRIBUTION. Kazakhstan: Taldy-Kurgan Area.

DESCRIPTION. FEMALE. Measurements. Carapace 1.07 long, 0.70 wide, 0.41 high at PLE. Ocular area 0.43 long, 0.67 wide anteriorly and 0.65 wide posteriorly. Diameter of AME 0.20. Abdomen 1.04 long, 0.73 wide. Cheliceral length 0.30. Clypeal height 0.03.

Length of leg segments: leg I – 0.49 + 0.24 + 0.31 + 0.21 + 0.20; leg II – 0.46 + 0.26 + 0.29 + 0.21 + 0.21; leg III – 0.60 + 0.29 + 0.33 + 0.30 + 0.24; leg IV – 0.50 + 0.30 + 0.46 + 0.36 + 0.27. Leg spination. Leg I: Tb v. 1-2-2ap; Mt v. 2-2ap. Leg II: Tb v. 0-1-0; Mt v. 2-2ap. Leg III: Tb pr., rt. and v. 0-1-0; Mt pr. and rt. 1-2ap., v. 2ap. Leg IV: Tb v. 0-1-0; Mt pr. 1-2ap., rt. and v. 2ap. Coloration. Carapace dark brown, shining, with a black eye field. Clypeus brown, hairless. Sternum, labium, maxillae and chelicerae light brown. Abdomen: dorsum monochromously dark brown, venter yellow-grey. Book-lung covers and spinnerets yellow-grey. All legs and palpi yellowish-greyish. Epigyne and spermathecae as shown in Figs 62, 63.

The *nigritus* species group

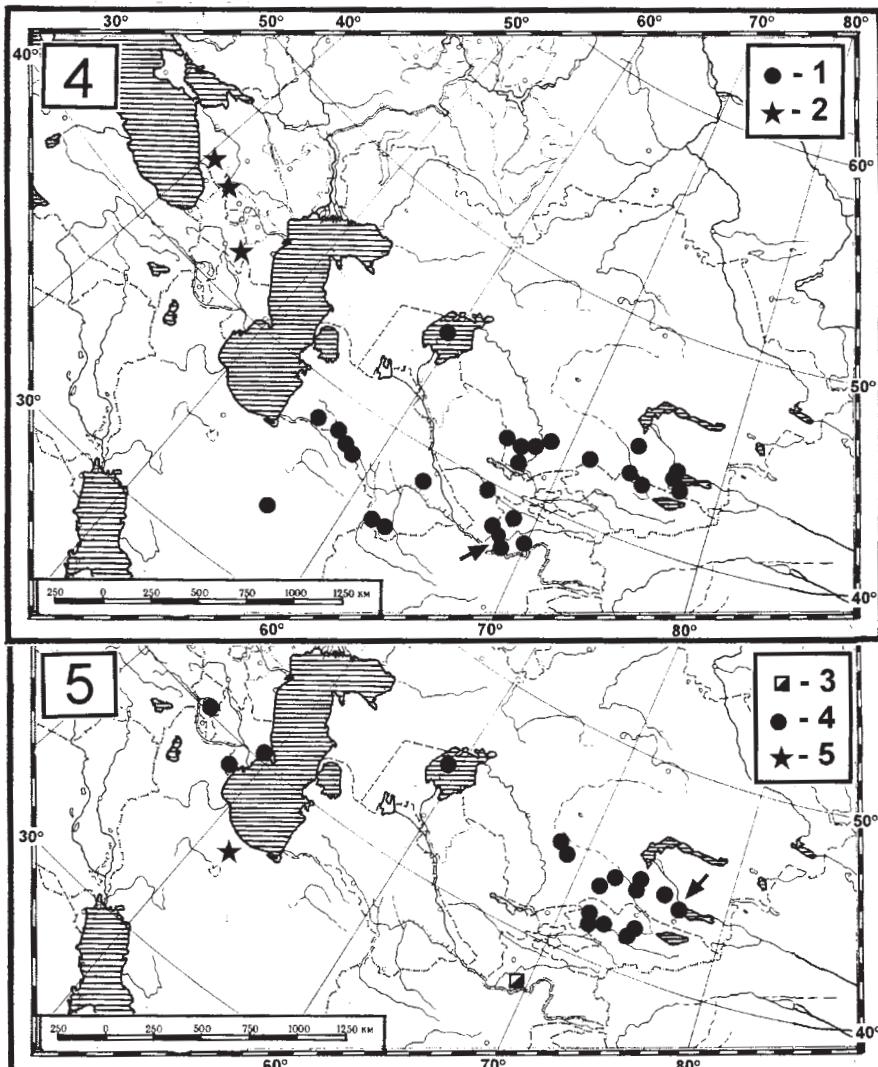

Chalcoscirtus (s.str.) *bortolgoi* sp.n.

Figs 36–37, Map 3.

Holotype ♀ (ISE), Mongolia, Bayanhkongor Aimak, Bayanlig Somon, Bor-Tolgoi (44°06'N, 100°56'E), 1,400 m as.l, 2–4.06.1997, YM.

Paratypes: 2♀ (ZMUM), 2♀ (ISE), together with holotype.

DIAGNOSIS. Both epigynal (cf. Fig. 36 and 51, 52, 59) and spermathecal (cf. Figs 37 and 52, 53, 60)

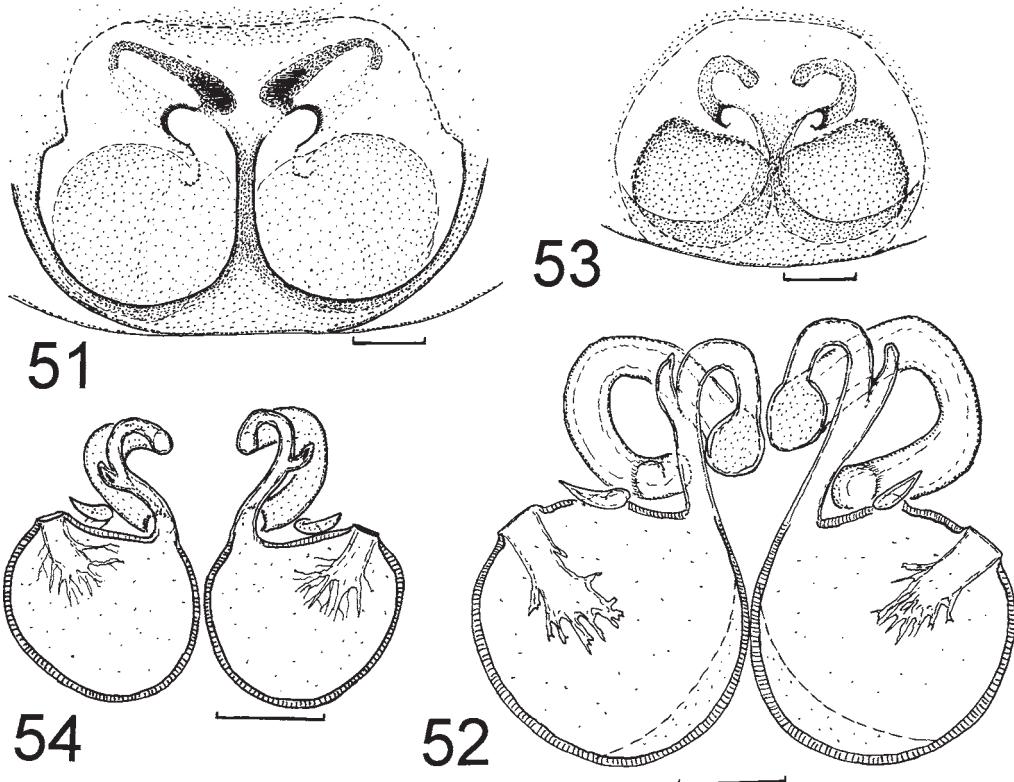

structures are diagnostic for this species.

DISTRIBUTION. The type locality only (Map 3).

DESCRIPTION. FEMALE. Measurements. Carapace 1.55 long, 1.05 wide, 0.93 high at PLE. Ocular area 0.71 long, 0.95 wide anteriorly and 0.90 wide posteriorly. Diameter of AME 0.25. Abdomen 2.53 long, 1.70 wide. Cheliceral length 0.48. Clypeus not marked. Length of leg segments: leg I – 0.75 + 0.48 + 0.50 + 0.38 + 0.30; leg II – 0.83 + 0.45 + 0.40 + 0.38 + 0.25; leg III – 0.85 + 0.50 + 0.50 + 0.48 + 0.35; leg IV – 0.98 + 0.48 + 0.68 + 0.58 + 0.45. Leg spination. Leg I: Tb v. 1-2-2ap.; Mt v. 2-2ap. Leg II: Tb v. 1-1-2ap.; Mt v. 2-2ap. Leg III: Tb pr. 0-1, v. 0-1-2ap.; Mt pr. 2ap., rt. 1-2ap., v. 2-2ap. Leg IV: Mt pr. 1-2ap., rt. and v. 2ap. Coloration. Carapace dark brown, almost black, sparsely covered with elongated, narrow, translucent/white scales. Eyes of first row surrounded by white scales. Sternum, maxillae, labium and chelicerae brown to dark brown. Abdomen dark grey to black and, like carapace, sparsely covered with elongated, narrow, translucent/white scales. Book-lung covers and spinnerets grey. All legs monochromously dark grey-brown. Epigyne and spermathecae as in Figs 36, 37.

NAME. The species is named after the type locality, i.e. Bor-Tolgoi, Bayanhkongor Aimak, Mongolia.

Figs 51–54. Female genitalia of *Chalcoscirtus tanasevichi* (51 from Zhambyl Area, Kazakhstan, 52 from Pavlodar Area, Kazakhstan) and *C. nigritus* (53–54 from E-Kazakhstan Area, Kazakhstan): 51, 53 — epigyne; 52, 54 — spermathecae. Scale: 0.1 mm.

Рис. 38–43. Гениталии самок *Chalcoscirtus tanasevichi* (51 из Жамбылской области (Казахстан), 52 из Павлодарской области (Казахстан)) и *C. nigritus* (53–54 из Восточно-Казахстанской области (Казахстан)): 51, 53 — эпигина; 52, 54 — сперматеки. Масштаб: 0,1 мм.

Chalcoscirtus (s.str.) *minutus* Marusik, 1990
Fig. 57, 58, Map 5.

Chalcoscirtus minutus Marusik, 1990: 54, ff. 4.3–5 (♂
holotype, in ZMUM, re-examined).

Chalcoscirtus minutus: Mikhailov, 1996: 130; 1997: 208

MATERIAL. TAJIKISTAN: 1 ♂ (ZMUM, holotype), lower reaches of Vakhsh River, "Tigrovaya Balka" Nature Reserve, 6.05.1986, coll.?

DIAGNOSIS. This species is very similar to *C. platnicki* but males can be separated by the smaller size of both body and palps, as well as by the proportions of the tegulum (cf. Figs 57 and 57).

DISTRIBUTION. The type locality only (Map 5).

DESCRIPTION. See Marusik [1990].

Chalcoscirtus (s.str.) *nigritus* (Thorell, 1875)
Figs 44–48, 53, 54, Map 2.

DIAGNOSIS. *C. nigritus* is most closely related to *C. tanasevichi* but males can be distinguished by the smaller embolic coil (cf. Figs 46–47 and 49) and shorter tibial apophysis (cf. Figs 48 and 50); females can be separated by the smaller and paler epigyne (the median septum almost invisible in *C. nigritus*) (cf. Figs 53 and 51) and the smaller receptacles (cf. Figs 54 and 52).

Figs 55–63. Genitalia of *Chalcoscirtus platnicki* (55–56, 61 from E-Kazakhstan, 59 from Turgai Area, Kazakhstan, 60 from Ustyurt Plateau, Kazakhstan), *C. minutus* (57–58, holotype) and *Chalcoscirtus* sp. (62–63 from Taldy-Kurgan Area, Kazakhstan): 55, 57 — male palp, ventral view; 56, 58 — tibial apophysis; 59, 62 — epigyne; 60, 61, 63 — spermathecae. Scale: 0.1 mm.

Рис. 55–63. Гениталии *Chalcoscirtus platnicki* (55–56, 61 из Восточного Казахстана, 59 из Тургайской области (Казахстан), 60 с плато Устюрт (Казахстан)), *C. minutus* (57–58, голотип) и *Chalcoscirtus* sp. (62, 63 из Талды-Курганской области (Казахстан)): 55, 57 — пальпа самца, вентрально; 56, 58 — голениный отросток; 59, 62 — эпигина; 60, 61, 63 — сперматеки. Масштаб: 0,1 мм.

DISTRIBUTION. This species displays a Euro-Siberian subboreal distribution pattern (Map 2).

HABITAT. In Siberia, this species has been collected in meadow steppe, while in S-Kazakhstan in loamy desert habitats.

DESCRIPTION (specimens from Kazakhstan, Dzhanaybek). MALE. Measurements. Carapace 1.64 long, 1.10 wide, 0.65 high at PLE. Ocular area 0.63 long, 0.83 wide anteriorly and 0.80 wide posteriorly. Diameter of AME 0.25. Abdomen 1.65 long, 0.95 wide. Cheliceral length 0.70. Clypeal height 0.08. Length of leg segments: leg I — 0.88 + 0.43 + 0.56 + 0.35 + 0.28; leg II — 0.78 + 0.35 + 0.45 + 0.35 + 0.28; leg III — 0.90 + 0.40 + 0.51 + 0.48 + 0.30; leg IV — 0.94 + 0.38 + 0.63 + 0.54 + 0.35. Leg spination. Leg I: Tb v. 1-2-2ap.; Mt v. 2-2ap. Leg II: Tb v. 1-1ap.; Mt v. 2-2ap. Leg III: Tb pr., rt. and v. 0-1-0; Mt pr. and rt. 1-2ap., v. 2-2ap. Leg IV: Tb v. 0-1-0; Mt pr. and r. 1-2ap., v. 2ap. Coloration. Carapace yellow-brownish, eye field black. Carapace sparsely covered with long white scales. Clypeus brownish, "cheeks" yellow, both sparsely covered with white hairs. Sternum, maxillae, labium and chelicerae yellow-brownish. Abdomen: dorsum brownish, with five pairs of transverse white spots; sides and venter yellow-brown. Book-lung covers yellow, tinged brown. Spinnerets brown. All legs and palpi yellow to yellow-brownish. Epigyne and spermathecae as in Figs 53, 54.

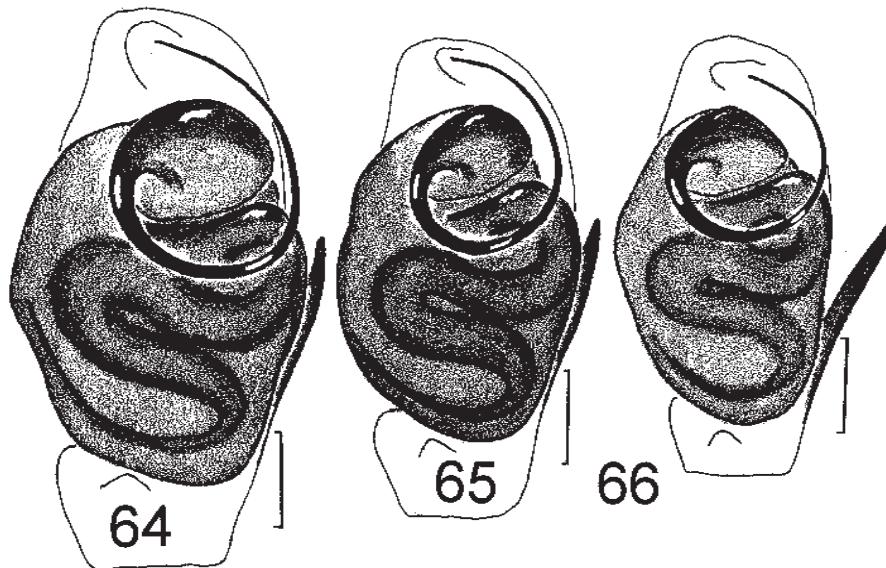

0.25. Abdomen 2.25 long, 1.40 wide. Cheliceral length 0.68. Clypeal height 0.08. Length of leg segments: leg I — 0.88 + 0.48 + 0.54 + 0.40 + 0.29; leg II — 0.75 + 0.38 + 0.45 + 0.35 + 0.29; leg III — 0.93 + 0.48 + 0.50 + 0.53 + 0.28; leg IV — 1.03 + 0.45 + 0.65 + 0.65 + 0.40. Leg spination. Leg I: Tb v. 1-2-2ap.; Mt v. 2-2ap. Leg II: Tb v. 1-1ap.; Mt v. 2-2ap. Leg III: Tb pr., rt. and v. 0-1-0; Mt pr. and rt. 1-2ap., v. 2-2ap. Leg IV: Tb v. 0-1-0; Mt pr. and r. 1-2ap., v. 2ap. Coloration. Carapace yellow-brownish, eye field black. Carapace sparsely covered with long white scales. Clypeus brownish, "cheeks" yellow, both sparsely covered with white hairs. Sternum, maxillae, labium and chelicerae yellow-brownish. Abdomen: dorsum brownish, with five pairs of transverse white spots; sides and venter yellow-brown. Book-lung covers yellow, tinged brown. Spinnerets brown. All legs and palpi yellow to yellow-brownish. Epigyne and spermathecae as in Figs 53, 54.

Chalcoscirtus (s.str.) *platnicki* Marusik in Eskov & Marusik, 1995

Figs 55, 56, 59–61, Map 6.

Chalcoscirtus platnicki Marusik in Eskov & Marusik, 1995: 68, 72, 78, ff. 91–92 (σ holotype, in ZMUM, re-examined).
Chalcoscirtus platnicki: Mikhailov, 1996: 130; 1997: 209.

FEMALE. Measurements. Carapace 1.68 long, 1.10 wide, 0.73 high at PLE. Ocular area 0.63 long, 0.85 wide anteriorly and 0.81 wide posteriorly. Diameter of AME

Figs 64–66. Male palpi (all ventral views) of *Chalcoscirtus paraansobicus* (64 from Babatagh Mt. Range, Uzbekistan, 65 from Uzun-Akhmat, Uzbekistan) and *C. ansobicus* (66 from Khabu-Rabot, Tajikistan). Scale: 0.1 mm.

Рис. 64–66. Палпы самцов (все вентрально) *Chalcoscirtus paraansobicus* (64 из хребта Бабатаг (Узбекистан), 65 из Узун-Ахмата (Узбекистан)) и *C. ansobicus* (66 из Хабу-Работа (Таджикистан)). Масштаб: 0,1 мм.

MATERIAL. KAZAKHSTAN: 1 ♀ (ZMUM), Zhambyl Area, Sarysu Distr., Lake Bolshye Kamkaly, 27.06.1989, A.Z.; 1 ♀ (ISE), Atyrau Area, Embinskij Distr., Kulsary, 4.06.1989, A. Raikhanov & S.I.; 1 ♀ (ISE), Almaty Area, Charyn Canyon, Sartogai, 12.06.1993, S.O.; 1 ♀ (ISE), Turgai Area, Arkalyk Distr., near Tselimnyi, Tersakan River, 2.06.1995, A.V. Gromov; 1 ♀ (ISE), E-Kazakhstan Area, S bank of Lake Zaisan, ca 10 km NW of Priozerney, 10.06.1997, R.Y. Dudko & V.K. Zinchenko; 1 ♂ (ZMUM, holotype), same area, Zaisan Distr., Saur Mt. Range, Sarybulak River, 7.06.1990, K.Y. Eskov; 1 ♂ (ISE), same locality, Akkolka River Valley (basin of Kenderlyk River), 5–27.06.1990, K.Y. Eskov.

DIAGNOSIS. Males are similar to those of *C. minutus* but differ in the larger size and the proportions of the tegulum (cf. Figs 55 and 57). Females are close to those of *C. nigritus* and *C. tanasevichi* but they can easily be separated by the shape of the insemination ducts (cf. Figs 60, 61 and 52, 54).

NOTES. Males and females of *C. platnicki* have been considered as matching only provisionally, as both sexes have never been collected together. However, we have got a female taken from a locality in E-Kazakhstan situated quite close to the type locality of *C. platnicki*. Moreover, both males and females well correspond to each other in size and coloration, so we are inclined to consider them as conspecific.

DISTRIBUTION. The species is distributed throughout Kazakhstan (Map 6).

HABITAT. In the E-Kazakhstan Area, the species has been collected in dry stony steppe habitats.

DESCRIPTION. MALE. See Eskov & Marusik [1995].

FEMALE (Kazakhstan, Charyn Canyon). Measurements. Carapace 1.48 long, 0.93 wide, 0.63 high at PLE. Ocular area 0.60 long, 0.85 wide anteriorly and 0.81 wide posteriorly. Diameter of AME 0.26. Abdomen 1.90 long, 1.30 wide. Cheliceral length 0.47. Clypeal height 0.07. Length of leg segments: leg I — 0.70 + 0.40 + 0.41 + 0.34 + 0.50; leg II — 0.64 + 0.36 + 0.36 + 0.32 + 0.50; leg III — 0.77 + 0.39 + 0.44 + 0.43 + 0.37; leg IV — 0.90 + 0.39 + 0.61 + 0.57 + 0.37. Leg spination. Leg I: Tb v. 1-2-2ap.; Mt v. 2-2ap. Leg II: Tb v. 0-1-0; Mt v. 2-2ap. Leg III: Tb pr., rt. and v. 0-1-0; Mt pr. and rt. 1-2ap., v. 2-2ap. Leg IV: Tb v. 0-1-0; Mt pr. and rt. 2 ap., v. 1-2ap. Coloration. Carapace brown, lustrous, shining, with a black eye field.

Clypeus brown, sparsely covered with white hairs. Sternum, maxillae, labium and chelicerae brown. Abdomen: dorsum dark grey, venter yellow-grey, each side with a longitudinal white stripe. Book-lung covers and spinnerets yellow-brownish. All legs and palpi brown, but patellae and tibiae dorsally and tarsi entirely yellow. Epigyne and spermathecae as in Figs 59–61.

Chalcoscirtus (s.str.) *tanasevichi* Marusik, 1991 Figs 49, 50, 51, 52, Map 5.

Chalcoscirtus tanasevichi Marusik, 1991a: 29, f. 5.1–5 (♂ holotype, in ZMUM, re-examined).

Chalcoscirtus tanasevichi: Eskov & Marusik, 1995: 72, 78; Mikhailov, 1996: 130; 1997: 209.

MATERIAL. DIAGNOSIS. See “Diagnosis” under *C. nigritus* and *C. platnicki*.

DISTRIBUTION. So far the species has been recorded throughout Middle Asia and the Caucasus (Map 5).

DESCRIPTION. FEMALE (Kyrgyzstan, Susamyrtoo Mt. Range). Measurements. Carapace 1.65

long, 1.15 wide, 0.73 high at PLE. Ocular area 0.78 long, 0.91 wide anteriorly and 0.88 wide posteriorly. Diameter of AME 0.40. Abdomen 2.43 long, 1.68 wide. Cheliceral length 0.68. Clypeal height 0.08. Length of leg segments: leg I – 0.95 + 0.50 + 0.63 + 0.40 + 0.30; leg II – 0.85 + 0.48 + 0.48 + 0.43 + 0.30; leg III – 1.00 + 0.48 + 0.55 + 0.55 + 0.35; leg IV – 1.10 + 0.49 + 0.79 + 0.71 + 0.45. Leg spination. Leg I: Tb v. 1-2-ap.; Mt v. 2-2ap. Leg II: Tb v. 1-1ap.; Mt v. 2-2ap. Leg III: Tb pr., rt. and v. 0-1-0; Mt pr. and rt. 1-2ap., v. 2-2ap. Leg IV: Tb v. 0-1-0; Mt 6 ap. Coloration. Carapace dark brown, lustrous shining, sparsely covered with long white scales. Eye field black. Clypeus brown, sparsely covered with long white hairs. Sternum, maxillae, labium and chelicerae brown. Abdomen: dorsum and sides brown, sides rather densely covered with white hairs; dorsum with colour markings consisting of five pairs of white transverse spots; venter yellow-brown. Book-lung covers and spinnerets yellow, tinged brown. All legs and palpi yellow-brown, femora usually dark brown. Epigyne and spermathecae as in Figs 51, 52.

The *ansobicus* species group

Chalcoscirtus (s.str.) *ansobicus* Andreeva, 1976
Figs 66, 70–72, Map 6.

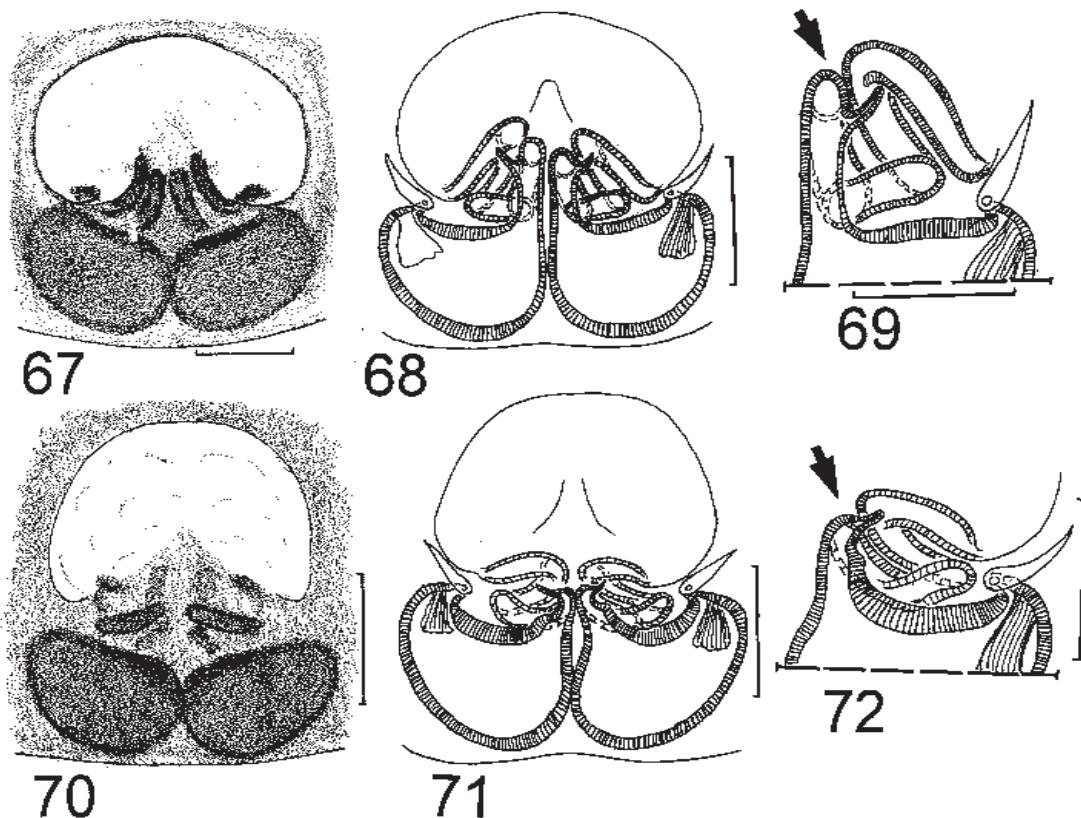

Chalcoscirtus ansobicus Andreeva, 1976: 91–92, f. 129 (♀ holotype, not re-examined).

Chalcoscirtus ansobicus: Andreeva, 1975: 340 (nomen nudum); Nenilin, 1985: 130.

Chalcoscirtus asiaticus (pro parte): Marusik, 1990: 53–54 (S with *C. asiaticus*); Mikhailov, 1996: 130; 1997: 208.

MATERIAL. TAJIKISTAN: 1 ♂, 3 ♀♀ (ISE), Darvaz Mt. Range, Pass Khabu-Rabot, 5.07.1976, V. Turkov.

DIAGNOSIS. So far as known (see “Notes” below), this species is particularly similar to *C. paraansobicus*, but it can be distinguished by the smaller tegulum (even in comparison with the smaller morph of the latter species) and the protruding tibial apophysis in males (cf. Figs 66 and 65) as well as by a different arrangement of the loops of the insemination ducts in females (the ducts

Figs 67–72. Female genitalia of *Chalcoscirtus paraansobicus* (67–69 from Uzun-Akhmat, Uzbekistan) and *C. ansobicus* (70–72 from Khabu-Rabot, Tajikistan): 67, 70 — epigyne; 68, 71 — spermathecae; 69, 72 — insemination ducts. Scale: 0.1 mm.

Рис. 67–72. Гениталии самок *Chalcoscirtus paraansobicus* (67–69 из Узун-Ахмата (Узбекистан)) и *C. ansobicus* (70–72 из Хабу-Работа (Таджикистан)): 67, 70 — эпигина; 68, 71 — сперматеки; 69, 72 — оплодотворительные каналацы. Масштаб: 0,1 мм.

of *C. ansobicus* pressed closer to the receptacles) (cf. Figs 72 and 69).

DISTRIBUTION. Tajikistan only (Map 6). Nenlin [1984b] reported *C. ansobicus* from Kyrgyzstan (Dzhalal-Abad and Kugart). Since we have been unable to re-examine these specimens, this record requires confirmation by rechecking pertinent material. However, most probably these findings belong to *C. paraansobicus*.

NOTES. The identification of *C. ansobicus* is provisional, as we have been unable yet to revise the holotype. One of us [Marusik, 1990] has synonymized *C. ansobicus* with *C. asiaticus*, but this idea in no longer supported in the present study (for further details see "Notes" under *C. infimus*). The structure of the epigyne (Fig. 70) corresponds quite well to that figured by Andreeva [1976: fig. 129] and differs from that found in the true *C. paraansobicus* (Fig. 67). We have studied about a dozen females of *C. paraansobicus* and are sure that the differences observed between Figs 70–72 and 67–69 cannot be a matter of intraspecific variability. So we actually deal with two closely related species. However, a re-examination of the holotype of *C. ansobicus* is further required to prove or reject our identification. We delay a redescription of this species before a restudy of its holotype has been performed.

Chalcoscirtus (s.str.) *kamchik* Marusik, 1991

Chalcoscirtus kamchik Marusik, 1991b: 24–25, ff. 7–10 (♀ holotype, in ZMUM, re-examined).

Chalcoscirtus kamchik: Mikhailov, 1996: 130; 1997: 208. MATERIAL. UZBEKISTAN: 1 ♀ (ZMUM, holotype, without epigyne), Tashkent Area, Pass Kamchik, 06.1979, A.B. Nenlin.

DIAGNOSIS. Unfortunately, the holotype of *C. kamchik* lacks the epigyne which was probably lost during the original description. Hence it appears impossible to fully diagnose this species. By its dorsal colour markings (see Marusik, 1991b: Fig. 10), *C. kamchik* is very similar to *C. lepidus* (Fig. 82), but the former has yellow stripes against a brown background, while the latter brown stripes against a yellow background. There seem to be clear differences in genitalic structure of both species as well [cf. Figs 79–80 and Marusik, 1991b: figs 7–9]. Moreover, the genitalia of *C. kamchik*, as shown by Marusik [1991b], seem to be closer to those of *C. ansobicus* and *C. paraansobicus* (see Figs 67–72). Thus, topotypes are required to finally diagnose and redescribe *C. kamchik*.

DISTRIBUTION. The type locality only.

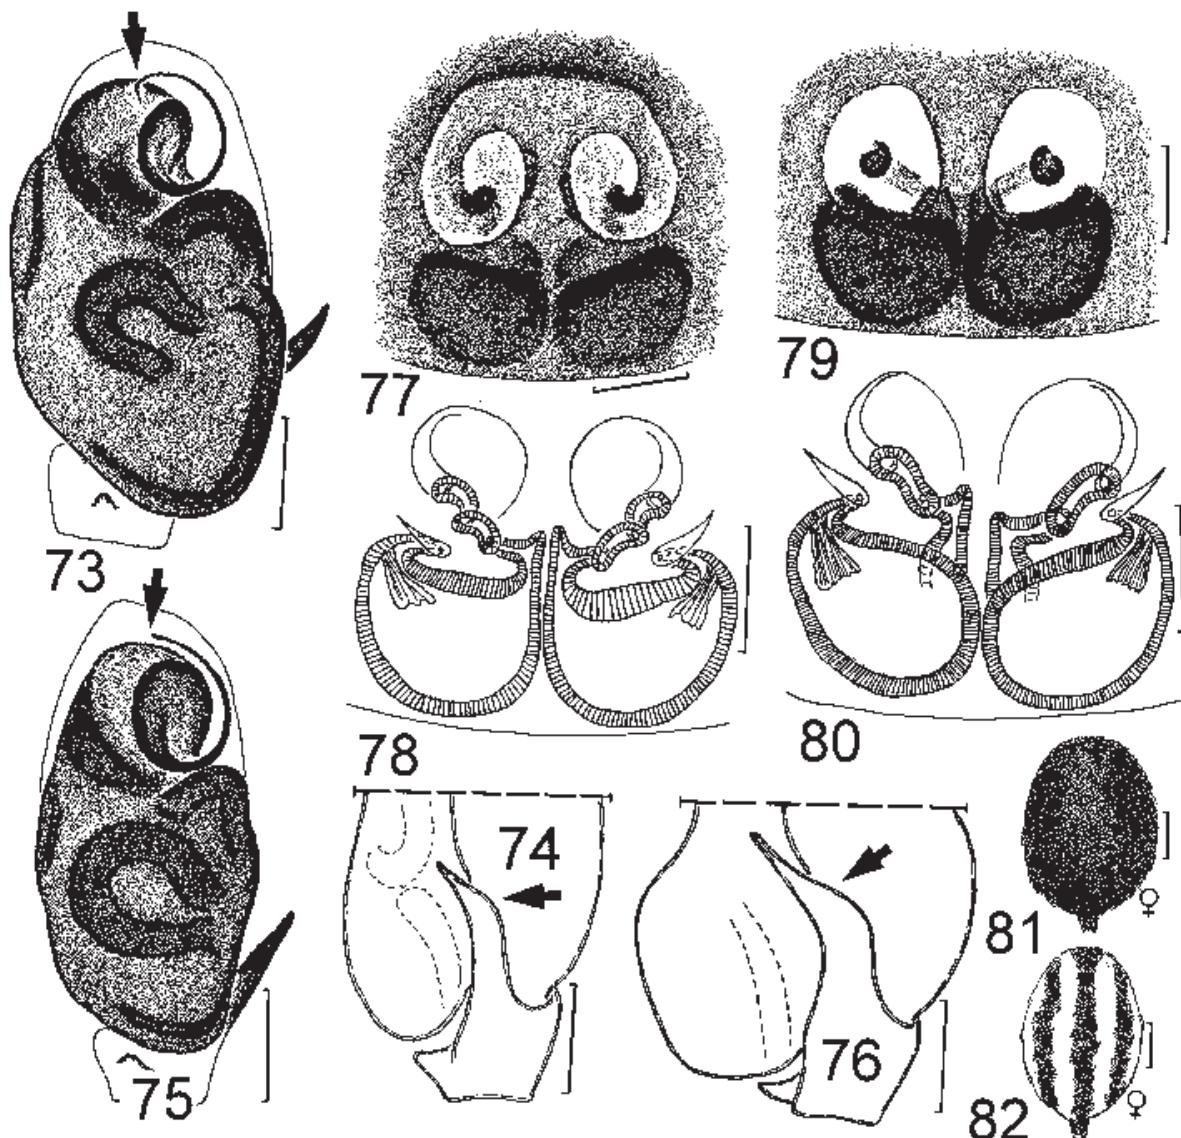

DESCRIPTION. See Marusik [1991b].

Chalcoscirtus (s.str.) *lepidus* Wesołowska, 1996 Figs 74, 75, 79, 80, 82, Map 8.

Chalcoscirtus lepidus Wesołowska, 1996: 26, f. 10A, B (♀ holotype, in ZMUM, re-examined).

Chalcoscirtus lepidus: Mikhailov, 1996: 130; 1997: 208.

MATERIAL. TURKMENISTAN: 2 ♀♀ (ZMUM, holotype and paratype), Krasnovodsk Area, Chilmamedkum Sands, 05.1987, E. Khachikov; 1 ♂, 4 ♀♀ (ISE), 20–25 km SE of Pulikhatum,

Range, Uzbekistan) and *C. lepidus* (74–75 from Samarkand Area, Uzbekistan, 79–80, 82 from Zulfagar Mt. Range, Turkmenistan): 73, 75 — male palp, ventral view; 74, 76 — tibial apophysis, prolateral view; 77, 79 — epigyne; 78, 80 — spermathecae; 81, 82 — ♀ abdomen, dorsal view. Scale: 73–80 0.1 mm; 81–82 0.5 mm.

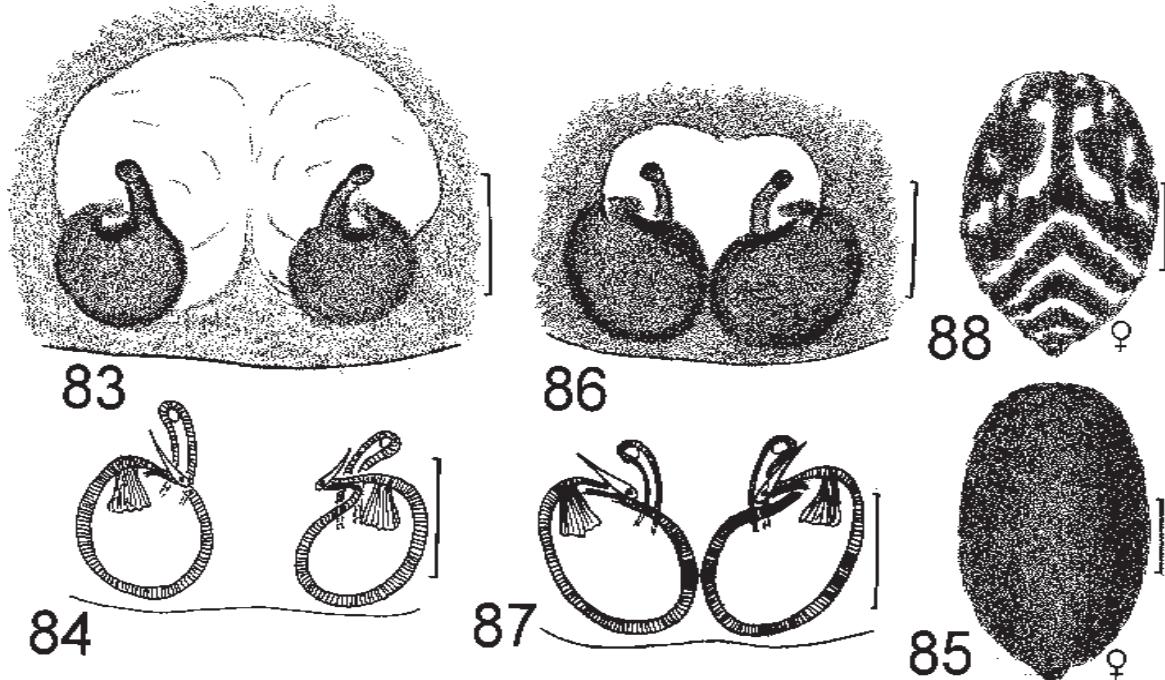

Рис. 73–82. Диагностические признаки *Chalcoscirtus zyuzini* (73, 76–78, 81 из Зеравшанского хребта (Узбекистан)) и *C. lepidus* (74–75 из Самаркандской области (Узбекистан), 79–80, 82 из Зульфагарского хребта (Туркменистан)): 73, 75 — пальпа самца, вентрально; 74, 76 — голеный отросток, пролатерально; 77, 79 — эпигина; 78, 80 — сперматека; 81, 82 — брюшко ♀, дорзально. Масштаб: 73–80 0,1 мм; 81–82 0,5 мм.

Gezgydyk Mt. Range, 1,000–1,100 m a.s.l., 15–16.04.1993, D.L.; 2 ♀♀ (FSCA), 1 ♀ (ISE), ca 37 km SE of Pulikhatum, Zulfagar Mt. Range, 13–14.04.1993, S.O. & D.L.; 1 ♀ (ZMUM), Badkhyz Nature Reserve, Kyzyl-Dzhar, 10–12.04.1993, D.L. — TAJIKISTAN: 1 ♂ (ISE), Kurgan-Tyube Area, Gandzhyna, 19.04.1991, S.O. — UZBEKISTAN: 1 ♂ (ZMUM), Samarkand Area, Sovetobad Distr, near Ulus, 1.07.1986, A.Z.

DIAGNOSIS. *C. lepidus* is most closely related to *C. zyuzini* but it can be distinguished by a set of the following characters:

N	character	<i>C. lepidus</i>	<i>C. zyuzini</i>
1	Dorsum	striped both in ♂ and ♀ (Fig. 82)	monochromously dark brown both in ♂ and ♀ (Fig. 81)
2	Venter	dark grey both in ♂ and ♀	yellow both in ♂ and ♀
3	♂ first leg	yellow with a black longitudinal line	monochromously dark grey
4	♂ abdomen	without dorsal scutum	with a dorsal scutum (black and shining)
5	Emolic tip	straight (arrowed in Fig. 75)	curved (arrowed in Fig. 73)
6	♀ genitalia	as in Figs 77, 78	as in Figs 79, 80

DISTRIBUTION. S-Uzbekistan, Turkmenistan and Tajikistan (see Map 8).

Figs 83–88. Diagnostic characters of *Chalcoscirtus koponeni* sp.n. (83–85, holotype) and *C. alpicola* (86–88 from upper reaches of Kolyma River, Magadan Area): 83, 86 — epigyne; 84, 87 — spermathecae; 85, 88 — ♀ abdomen, dorsal view. Scale: 83–84, 86–87 0.1 mm; 85, 88 0.5 mm.

Рис. 83–88. Диагностические признаки *Chalcoscirtus koponeni* sp.n. (83–85, голотип) и *C. alpicola* (86–88 из верховьев Колымы (Магаданская область)): 83, 86 — эпигина; 84, 87 — сперматеки; 85, 88 — брюшко ♀, дорзально. Масштаб: 83–84, 86–87 0,1 мм; 85, 88 0,5 мм.

DESCRIPTION. MALE (Uzbekistan, Ulus). Measurements. Carapace 1.06 long, 0.69 wide, 0.40 high at PLE. Ocular area 0.44 long, 0.61 wide anteriorly and 0.60 wide posteriorly. Diameter of AME 0.19. Abdomen 1.03 long, 0.69 wide. Cheliceral length 0.37. Clypeal height 0.04. Length of leg segments: leg I — 0.50 + 0.26 + 0.31 + 0.26 + 0.23; leg II — 0.44 + 0.24 + 0.29 + 0.23 + 0.22; leg III — 0.54 + 0.23 + 0.33 + 0.31 + 0.23; leg IV — 0.59 + 0.26 + 0.43 + 0.40 + 0.31. Leg spination. Leg I: Tb v. 1-2; Mt v. 2-2ap. Leg II: Tb v. 0-1-0; Mt v. 2-2ap. Leg III: Tb pr. and rt. 0-1; Mt pr., rt. and v. 1-2ap. Leg IV: Mt 6ap. Coloration. Carapace brown, with black veins. Eye field dark brown, with black around eyes. Clypeus yellow-brown, hairless. Carapace sparsely covered with light elongated scales. Sternum yellow with brown margins. Maxillae, labium and chelicerae yellow but tinged brown. Abdomen: dorsum yellow with three longitudinal brown stripes and a large lustrous scutum; sides yellow-grey; venter yellow but tinged grey. Booklung covers and spinnerets yellow, tinged grey. All legs yellow but sides of all segments but tarsi brown. Palpal structure as in Figs 75, 76.

Range, near Gandzhy-na, 800 m as.l., 21.04.1986, A.Z.; 3 ♂♂ (ISE), same locality, 19.04.1991, S.O.; 3 ♂♂ (ISE), same locality, 19.04.1991, S.O.; 2 ♀♀ (ZISP), near Varganza, 1.06.1978, V.O.

DIAGNOSIS. See “Diagnosis” under *C. lepidus*.

DISTRIBUTION. Southern regions of Kazakhstan, Uzbekistan and Tajikistan (Map 8).

DESCRIPTION. FEMALE (Uzbekistan, foothills of Zeravshansky Mt. Range). Measurements. Carapace 1.30 long, 0.87 wide, 0.57 high at PLE. Ocular area 0.54 long, 0.79 wide anteriorly and 0.77 wide posteriorly. Diameter of AME 0.24. Abdomen 1.50 long, 1.10 wide. Cheliceral length 0.43. Clypeal height 0.04. Length of leg segments: leg I — 0.61 + 0.37 + 0.40 + 0.33 + 0.24; leg II — 0.57 + 0.33 + 0.34 + 0.30 + 0.24; leg III — 0.71 + 0.36 + 0.43 + 0.40 + 0.31; leg IV — 0.77 + 0.37 + 0.54 + 0.50 + 0.31. Leg spination. Leg I: Tb v. 1-2-2ap.; Mt v. 2-2ap. Leg II: Tb v. 1-1ap.; Mt v. 2-2ap. Leg III: Tb rt. and v. 0-1-0; Mt pr., rt. and v. 1-2ap. Leg IV: Mt 6 ap. Coloration. Carapace dark brown, lustrous, shining. Eye field black. Clypeus and “cheeks” yellow, hairless. Sternum, maxillae, labium and chelicerae yellow-brown. Abdomen:

dorsum and sides monochromously grey (Fig. 81), venter yellow-grey. Book-lung covers and spinnerets yellow-grey. All legs and palpi yellow. Epigyne and spermathecae as shown in Figs 77, 78.

Subgenus *Chalcosibiricus* Marusik, 1991

The alpicola species group

Chalcoscirtus (Chalcosibiricus) alpicola (L. Koch, 1846)

Figs 86–88.

Chalcoscirtus alpicola: Marusik, 21, ff. 1.6–9; Danilov & Logunov, 1993: 28; Danilov, 1995: 62; Mikhailov, 1996: 130; 1997: 208.

MATERIAL. MONGOLIA: 1 ♂ (ISE), Bayanhkongor Aimak, Gurvanbulag Somon, Khokh-Nuur (Lake) (47°32'N, 98°32'E), 2,600 m as.l., 7–10.06.1997, Y.M.

For other material studied see Marusik [1991a] and Danilov & Logunov [1993].

DIAGNOSIS. See “Diagnosis” below under *C. koponeni*.

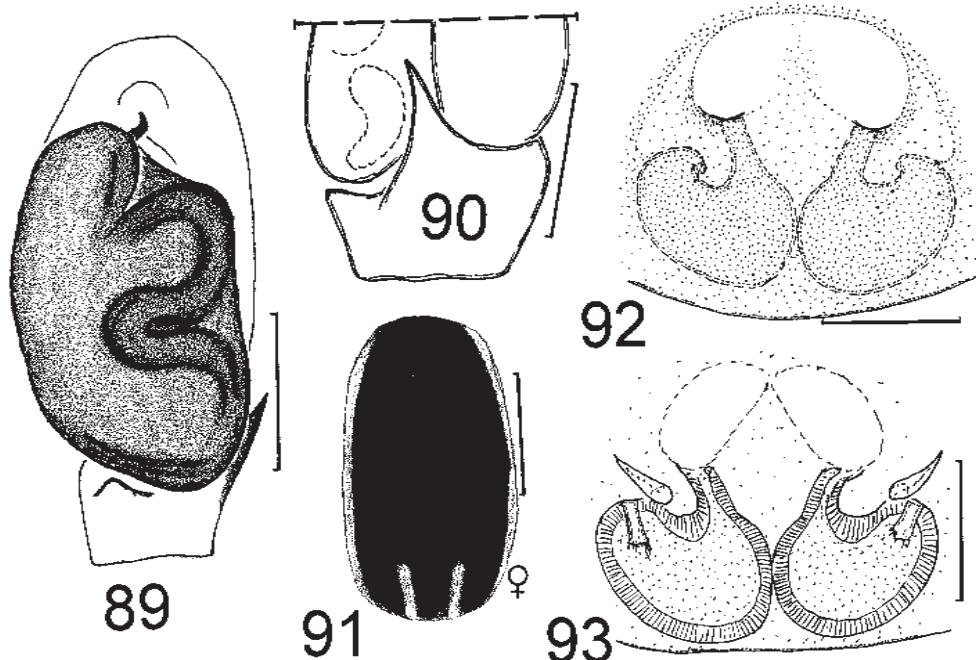

DISTRIBUTION. The species displays a Holarctic hypoarctic-montane distribution pattern, the Mongolian records are southernmost ones for this species.

DESCRIPTION. See Marusik [1991a].

Chalcoscirtus (Chalcosibiricus) koponeni sp.n.
Figs 83–85, Map 3.

Holotype ♀ (ISE), Russia, Tuva, Tannu-Ola Mt. Range, ca 20–25 km NW of Khol-Oozhu (50°50'N, 94°18'E), 2,120 m as.l., 8–17.06.1995, S. Koponen.

DIAGNOSIS. By genitalic structure, this species is most similar to *C. alpicola* but it can easily be separated by the

Figs 89–93. Diagnostic characters of *Chalcoscirtus parvulus* (Gandzhyna, Tajikistan): 89 — male palp, ventral view; 90 — tibial apophysis, retrolateral view; 91 — ♀ abdomen, dorsal view; 92 — epigyne; 93 — spermathecae. Scale: 89–90, 92–93 0.1 mm; 91 0.5 mm.

Рис. 89–93. Диагностические признаки *Chalcoscirtus parvulus* (Ганджина (Таджикистан)): 89 — пальпа самца, вентрально; 90 — голениный отросток, ретролатерально; 91 — брюшко ♀, дорзально; 92 — эпигина; 93 — сперматеки. Масштаб: 89–90, 92–93 0,1 мм; 91 0,5 мм.

monochromous abdominal coloration (cf. Figs 85 and 88) and the position of the receptacles which are separated widely from each other (cf. Figs 83, 84 and 86, 87).

DISTRIBUTION. The type locality only (Map 3).

HABITAT. The holotype has been collected in the litter of a *Pinus cembra-Larix* forest.

DESCRIPTION. FEMALE. Measurements. Carapace 1.30 long, 0.89 wide, 0.63 high at PLE. Ocular area 0.56 long, 0.79 wide anteriorly and 0.76 wide posteriorly. Diameter of AME 0.23. Abdomen 2.03 long, 1.39 wide. Cheliceral length 0.40. Clypeal height 0.06. Length of leg segments: leg I — 0.60 + 0.36 + 0.36 + 0.30 + 0.23; leg II — 0.54 + 0.34 + 0.30 + 0.27 + 0.23; leg III — 0.63 + 0.31 + 0.36 + 0.34 + 0.29; leg IV — 0.77 + 0.36 + 0.53 + 0.49 + 0.31. Leg spination. Leg I: Tb v. 1-2-2ap.; Mt v. 2-2ap. Leg II: Tb v. 1-1ap.; Mt v. 2-2ap. Leg III: Tb pr., rt. and v. 0-1-0; Mt pr. and rt. 2 ap., v. 1-2ap. Leg IV: Tb v. 0-1-0; Mt pr. and rt. 2 ap., v. 1-2ap. Coloration. Carapace light brown with a black eye field. Clypeus brown, hairless. Sternum and chelicerae light brown. Maxillae and labium yellow-brown. Abdomen yellow-grey (Fig. 85). Book-lung covers and spinnerets yellow, tinged brown. All legs and palpi yellow. Epigyne and spermathecae as in Figs 83, 84.

NAME. We are very pleased to name the new species after its collector, Dr. Seppo Koponen, the Finnish arachnologist, our friend and colleague who collaborates with and supports us for many years.

The *martensi* species group

Chalcoscirtus (Chalcosibiricus) parvulus Marusik, 1991, stat.n.

Figs 89–93, Map 4.

MATERIAL. TURKEY: 1 ♀ (ZMTU), Izmir Distr., Yamanlar Dagi, 1,100 m a.s.l., 24.05.1973, P. Lehtinen & F. Önder. — IRAN: 1 ♀ (PSU), “Kerman, April 59, Keyserling et Biemert, 1869”. — KAZAKHSTAN: 1 ♀ (FSCA), Almaty Area, Ili Distr., 60th km of highway Almaty-Kapchagai, 26.05.1988, A.Z.; 1 ♀ (ISE), same area, Chilik Distr., Kokpeki Canyon, 28–29.05.1988, C.K. Tarabaev & A.Z.; 1 ♀ (ZMUM), same area, Talgar Distr., Ili River, 26.05.1990, A.F. & A.Z.; 1 ♂, 2 ♀♀ (ISE), S-Kazakhstan Area, near Arys, 21.05.1987–1.05.1988, D.L.; 1 ♀ (ISE), Arys Distr., ca 102 km NW of Bairkum, Dyusebai Well, 27–28.05.1993, A.Z.; 1 ♀ (ISE), Moiynkumy Distr., ca 17 km E of Khantau, foothill of Mt. Sunkar, 12.06.1990, A.F. & A.Z.; 1 ♀ (ISE), Manghistauz Area, Ustyurt Plateau, Ustyurt Nature Reserve, Kendirli Well, 20.05.1989, A.Z.; 1 ♂ (ISE), same area, Kuibyshevo, 19.05.1985, A.Z.; 1 ♂ (ZMUM), Aral Sea, Barsakelmes Island, 5.05.1982, D.D. Piruyukh; 1 ♀ (ISE), Zhambyl Area, Krasnogorka Distr., ca 19 km NW of Kenen, Chu-Ili Mts., 15.06.1990, A.Z. — TAJIKISTAN: 1 ♀ (ISE), near Varganza, 23.05.1978, V.O.; 1 ♀ (ISE), Garavuti, 22.04.1986, A.Z.; 4 ♂♂, 1 ♀ (ISE), Kurgan-Tyube Area, Dzhilikul Distr., near Gandzhyna, 19.04.1991, S.O.; 1 ♀ (ZMUM), Pyandzh Karatau Mt. Range, foothill of Mt. Aktash, 800 m a.s.l., 26.04.1991, S.O.; 1 ♂, 1 ♀ (ISE), Dusti, 26–28.04.1991, S.O. — UZBEKISTAN: 1 ♀ (ISE), Dzhizak Area, Ishmantop, 6.05.1990, A.F. & A.Z.; 1 ♀ (ZMUM), Samarkand Area, Sovetobad Distr., near Ulus, 1.07.1986, A.Z.; 1 ♀ (ZMUM), ca 40 km SW of Tashkent, Gulbakhor, 30.04.1986, S. Kurbatov; 1 ♀ (FSCA), Surkhandarya Area, 40–47 km SE of Denau, Babatagh Mt. Range, 5–13.05.1994, A.Z.; 1 ♂, 5 ♀♀ (ISE), ca 7 km N of Kitab, S foothills of Zeravshansky Mt. Range, 800 m a.s.l., 04.1993, D.L. — TURKMENISTAN: 2 ♂♂, 1 ♀ (ISE), 5 km S of Firyuza, 20.04–20.05.1987, V.D.; 1 ♂, 1 ♀ (ZMUM), Kopetdag Nature Reserve, Kalininsky Section, 18.05.1987, V.D.; 2 ♂♂, 3 ♀♀ (ISE), Repetek, Karakumy Desert, 18–22.04.1993, D.L. & S.O.; 2 ♂♂ (ZMUM), 12 ♂♂ (ISE), ca 10 km SW of Balkharden, 3–4.04.1993, D.L.; 8 ♂♂, 5 ♀♀ (ISE), 2 ♂♂ (ZMUM), 20–25 km SE of Pulikhatum, Gezgyadyk Mt. Range, 500–1,100 m a.s.l., 15–16.04.1993, D.L.; 1 ♀ (ZMUM), ca 40 km SE of Pulikhatum, Zulfagar Mt. Range, 1,000 m a.s.l., 13–14.04.1993, D.L.; 1 ♂ (FSCA), ca 13 km N of Chemen-Ibit, ca 20

km NE of Bairam-Ali, 18–20.04.1993, A.Z.; 1 ♂ (FSCA), ca 60 km N of Gyzhgyl [= Kushka], near Kala-i-Mor, 9–20.04.1993, D.L.; 1 ♂ (ISE), Badkhyz Nature Reserve, 10–12.04.1993, D.L.

DIAGNOSIS. This species is most similar to *C. martensi* Žabka, 1980. Since the small differences observed in the structure of the embolic division between *C. martensi* [Žabka, 1980: figs 1–2] and *C. martensi parvulus* [Marusik, 1991a: figs 4.1–4] (see also Figs 89, 90) appear consistent, both taxa can be considered as separate species. Moreover, because of these differences, the rank of *C. martensi parvulus* is here revised and elevated to full species: *C. parvulus*, stat.n.

DISTRIBUTION. This is a lowland Turanian species (Map 4), with its westernmost locality lying in Turkey, Izmir (not shown in Map 4).

DESCRIPTION. See Marusik [1991a: sub *C. martensi parvulus*] and Wesołowska [1996; sub *C. martensi parvulus*].

The *glacialis* species group

Chalcoscirtus (Chalcosibiricus) glacialis Caporiacco, 1935

Chalcoscirtus glacialis sibiricus Marusik, 1991a: 24, ff. 2.3–5, 3.3–4 (♂ holotype, in ZMUM, re-examined).

Range, left bank of Tarkhata River, 2,400–3,100 m a.s.l., summer 1997, R. Dudko; 1 ♂ (ISE), Chita Area, Daurian Nature Reserve, N bank of Lake Zun-Torei, Mt. Kuku-Khadan, 8–13.06.1995, R.D.; 1 ♀ (ISE), Erzin Distr., NE bank of Lake Tere-Khol, Sharlaa (50°47'N 95°45'E), 1,050 m a.s.l., 6–14.07.1996, Y.M.; 1 ♀ (ISE), same area, middle flow of Kargy River (50°31'N 97°03'E), 1,400 m a.s.l., 28–30.06.1996, Y.M.; 7 ♂♂, 3 ♀♀ (ISE), Chukot Peninsula, middle flow of Anadyr River, Lake Utyosnoye, (65°10'N 173°90'E), 6.07.1996, D.I. Berman. — KAZAKHSTAN: 1 ♀ (PSU), E-Kazakhstan Area, near Lake Zaisan, Mt. Ak-Tas, 5.08.1936, D.E. Kharitonov. — MONGOLIA: 1 ♂, 3 ♀♀ (ISE), Bayanhkongor Aimak, Bayanlig Somon, Bogd Somon, Ikh-Bogd Mt. Range, Pass Ikh-Bogd (44°43'N 100°52'E), 2,000–2,100 m a.s.l., 4–6.06.1997, Y.M.; 2 ♂♂, 2 ♀♀ (ISE), Bayanhkongor Aimak, Gurvanbulag Somon, Khokh-Nuur (Lake) (47°32'N 98°32'E), 2,600 m a.s.l., 7–10.06.1997, Y.M.; 1 ♀ (ISE), Arkhangai Aimak, Ondrer-Ulaan, Tsakhir, Chulut Gorge (48°07'N 100°22'E), 2,100 m a.s.l., 10–13.06.1997, Y.M.

DIAGNOSIS. See Marusik [1991a: sub *C. glacialis sibiricus*].

DISTRIBUTION. This is a Siberio-North American temperate species, with its S and SW localities lying in Central Asia (Mongolia, Altai and E-Kazakhstan). Only recently it has been found in Alaska (Yukon Territory) [Dondale et al., 1997].

Prószyński [1976] reported *C. glacialis* from the Pamirs, referring to Andreeva's work [1976]. This is a wrong record, as Andreeva's work does not contain these data.

NOTES. While describing *C. glacialis sibiricus*, Marusik [1991] did not examine the holotype of *C. glacialis*. Instead, he compared material from NE-Siberia as well as samples newly collected from Tuva, S-Siberia with the Mongolian specimens of *C. glacialis* determined

and reported as such earlier by Prószyński [1982]. One of us (DL) has again compared all Siberian and Mongolian material of both *C. glacialis glacialis* and *C. glacialis sibiricus* (sensu Marusik, 1991a), including the holotype of the latter subspecies, and found no clear differences between them. Thus, *C. glacialis sibiricus* is perhaps a junior synonym of *C. glacialis*, though this synonymy is not formalized here as the problem calls for further re-examination of the holotype of *C. glacialis*.

Based on Prószyński's [1984: 42] figures of the holotype of *Euophrys elongata* described from Urdukas, Karakorum, it seems safe to conclude, this species is a synonym of *C. glacialis*. Both species in question, *Euophrys elongata* and *C. glacialis*, were described by Caporiacco [1935] in the same paper, but the description of the latter taxon (p. 197) precedes that of the latter one (p. 204). Thus, *C. glacialis* is chosen as the valid name for this species.

DESCRIPTION. See Marusik [1991a: sub *C. glacialis sibiricus*].

Chalcoscirtus (Chalcosibiricus) hyperboreus Marusik, 1991

Chalcoscirtus hyperboreus Marusik, 1991a: 25–26, ff. 2.6–9, 3.5–6 (♀ holotype, in ZMUM, re-examined).

Chalcoscirtus hyperboreus: Danilov & Kurtova, 1991: 34; Danilov & Logunov, 1993: 28; Mikhailov, 1996: 130; 1997: 208.

MATERIAL AND DIAGNOSIS. See Marusik [1991a].

DISTRIBUTION. So far the species has been recorded in the Magadan Area (upper flow of Kolyma River) and Transbaikalia (Sokhondo Nature Reserve) [Marusik, 1988; Danilov & Kurtova, 1991; Danilov & Logunov, 1993].

NOTES. In the original description, Marusik [1991a] reported a female holotype of *C. hyperboreus*, but actually its holotype is a male (deposited in the ZMUM, re-examined).

DESCRIPTION. See Marusik [1991a].

Acknowledgements. We wish to express our warmest thanks to the following persons who contributed specimens for this study: Dr. P.D. Dunin (Tigliatti), Dr. A.A. Zyuzin and Mr. A.V. Gromov (both from Almaty), Mr. O.V. Lyakhov (Pavlodar), Dr. V.V. Dubatolov and Mr. V.K. Zinchenko (Novosibirsk), and Mr. S.V. Ovtchinnikov, Dr. S.L. Zonstein and Mr. D.A. Milko (Bishkek). Our special thanks are extended to Dr. K.G. Mikhailov, of the ZMUM, Drs. S. Koponen and M. Saaristo, of the ZMTU, Dr. S.L. Esyunin, of the PSU, Prof. J. Prószyński, of the IZW, and Dr. V.I. Ovtsharenko, of the ZISP, for the opportunity to study some material under their care. Finally, our thanks also go to Dr. S.I. Golovatch (Moscow) for his kind linguistic help.
