KEY WORDS: Cerambycidae, list of species, Zhiguli Natural Reserve, Samarskaya Luka, Samara region, Russia.

КЛЮЧЕВЫЕ СЛОВА: Cerambycidae, список видов, Жигулёвский заповедник, Самарская Лука, Самарская область, Россия.

ABSTRACT. The list includes 73 species and based on concrete specimens mostly from the collection of Zhiguli State Natural Reserve. No published data are included because of too many wrong determinations in current literature. *Cortodera reitteri* is recorded first time for Central Russia. Before it was not known northwards Volgograd region. *Exocentrus lusitanus* and *Ropalopus insubricus fischeri* are firstly recorded for the region of Samarskaya Luka. The most interesting species of the region are: *Stenocorus quercus*, *Cortodera villosa*, *Leptura thoracica*, *Rosalia alpina*, *Xylotrechus ibex*, *Cyrtoclytus capra*, *Leiopus punctulatus*.

РЕЗЮМЕ. Приводится список 73 видов жуков-усачей, хранящихся в основном в коллекции Жигулёвского государственного заповедника. В список не включены литературные данные, так как существующие публикации содержат многочисленные старые ошибочные определения, которые невозможно проверить. *Cortodera reitteri* впервые указывается для фауны Средней России. До сих пор она не была известна севернее Волгоградской области. *Exocentrus lusitanus* и *Ropalopus insubricus fischeri* впервые указаны для Самарской Луки. К наиболее интересным видам региона можно отнести: *Stenocorus quercus*, *Cortodera villosa*, *Leptura thoracica*, *Rosalia alpina*, *Xylotrechus ibex*, *Cyrtoclytus capra* и *Leiopus punctulatus*.

Introduction

Cerambycidae of Samarskaya Luka and adjacent regions were recently listed by D.V. Magdeev [2007] as a part of “Cadastre of Invertebrata of Samarskaya Luka”. But that work is very far from the reality as includes a lot of old wrong published determinations. The list by Magdeev contains many names of Cerambycidae species, which are just impossible for the fauna of Central

Russia: *Cortodera humeralis* (Schaller, 1783), *C. umbripennis* Reitter, 1890, *C. pumila* Ganglbauer, 1882, *Anastrangalia dubia* (Scopoli, 1763), *Molorchus plagiatus* Reiche, 1877 and others. So, a new publication based on real specimens is necessary.

Nearly all species included in the present list are preserved in the collection of Zhiguli State Natural Reserve (bellow ZNR). The collection was re-determined and prepared by M.L. Danilevsky in 2008. The list also includes all specimens collected same year here by M.L. Danilevsky and preserved now in his collection as well as a few other specimens from his collection collected in the region by different entomologists. So, each name in the current list is connected with concrete specimens.

The work also includes specimens from the nearest environs of Samarskaya Luka (bellow SL), as it was accepted in the published cadastre: Samara-city, Syzran and so on.

Taxonomy of the list, species names and order of taxa are following “The list of Cerambycidae of Europe” [Danilevsky, 2008].

Conclusions

73 Cerambycidae species are reliably known from Samarskaya Luka and adjacent regions.

Cortodera reitteri is recorded for the first time for the Central Russia. Before it was not known northwards Volgograd region [Danilevsky, 2001].

Exocentrus lusitanus and *Ropalopus insubricus fischeri* are firstly recorded for the region of Samarskaya Luka.

The most interesting species of the region are: *Stenocorus quercus*, *Cortodera villosa*, *Leptura thoracica*, *Rosalia alpina*, *Xylotrechus ibex*, *Cyrtoclytus capra*, *Leiopus punctulatus*.

Most of old records of Cerambycidae species (totally 127) published for the region and summarized by D.V. Magdeev [2007] need confirmations by new materials.

The records for the region of such species as *Cortodera humeralis* (Schaller, 1783) — distributed in West Europe westwards Central Ukraine, *C. umbripennis*

Reitter, 1890 — Caucasus and Turkey, *C. pumila* Ganglbauer, 1882 — Caucasus and Turkey, *Anastrangalia dubia* (Scopoli, 1763) — Caucasus, Turkey and West Europe, *Molorchus plagiatus* Reiche, 1877 — Caucasus, were definitely wrong.

ACKNOWLEDGEMENTS. I am very grateful to all colleagues, who collected materials used in the present work and specially to: T.V. Galas'eva, M.L. Danilevsky, I.V. Dyuzhaeva, Yu.P. Krasnobaev, I.V. Lyubvina and D.V. Magdeev. I wish to express my hearty thanks to M.L. Danilevsky, who identified all available specimens and took part in the final arrangement of the text.
