KEY WORDS: Russian Far East, Sikhote-Alin Nature Reserve, new records, protected areas.

КЛЮЧЕВЫЕ СЛОВА: Дальний Восток России, Сихотэ-Алинский заповедник, новые находки, особо охраняемые природные территории.

ABSTRACT. Twenty-seven species of six families are recorded from the Sikhote-Alin Nature Reserve: Gyrinidae (1 species), Haliplidae (2), Noteridae (1), Dytiscidae (13), Hydrophilidae (9), and Hydraenidae (1). Additional records are provided for 29 species from Primorsky Krai: Dytiscidae (8), Hydrophilidae (20), and Elmidae (1). Three species (*Oreodytes mongolicus*, *Sphaeridium bipustulatum*, and *S. marginatum*) are recorded for the first time from the Russian Far East. One species of Gyrinidae (*Gyrinus sachalinensis*), one species of Dytiscidae (*Oreodytes mongolicus*), and two species of Hydrophilidae (*Sphaeridium bipustulatum* and *S. marginatum*) are recorded from Primorsky Krai for the first time. A new synonymy is established: *Cercyon terminatus* (Marsham, 1802) = *Cercyon emarginatus* Baranowski, 1985 *syn.n.*

РЕЗЮМЕ. В Сихотэ-Алинском заповеднике зарегистрировано 27 видов из шести семейств: Gyrinidae (1 вид), Haliplidae (2), Noteridae (1), Dytiscidae (13), Hydrophilidae (9) и Hydraenidae (1). Приведены дополнительные сведения о находках 29 видов в Приморском крае: Dytiscidae (8), Hydrophilidae (20) и Elmidae (1). Три вида (*Oreodytes mongolicus*, *Sphaeridium bipustulatum* и *S. marginatum*) впервые указаны с Дальнего Востока России. Один вид Gyrinidae (*Gyrinus sachalinensis*), один вид Dytiscidae (*Oreodytes mongolicus*) и два вида Hydrophilidae

(*Sphaeridium bipustulatum* и *S. marginatum*) впервые отмечены в Приморском крае. Установлена новая синонимия: *Cercyon terminatus* (Marsham, 1802) = *Cercyon emarginatus* Baranowski, 1985 *syn.n.*

Introduction

The protected areas of Primorsky Krai in the Russian Far East include six nature reserves, four national parks, ten habitat/species management areas, one botanical garden, one dendrological park, and one nature park [Maslovskaya et al., 2020]. Our study is based mainly on material collected in the Sikhote-Alin Nature Reserve.

The Sikhote-Alin Nature Reserve is a biosphere reserve in Primorsky Krai. It is located in a watershed (between Sereryanka and Dzhigitovka Rivers) that stretches from the eastern part of the krai (province) of the humid golets-forested medium height eastern slopes of the Central Sikhote-Alin mountain range (Terneysky, Krasnoarmeysky, and Dalnegorski Districts of Primorsky Krai) up to the Sea of Japan. The total area of the Sikhote-Alin Nature Reserve is 3,901.84 km².

The Sikhote-Alin Nature Reserve occupies the middle and lower reaches of the Kolumbe River (tributary of the Bolshaya Ussurka River), upper and middle reaches of the rivers Serebryanka and Zab-

olochennaya, and three tributaries of the Dzhigitovka River (Kuruma, Lianovaya, and Kunaleyka Rivers) [Pimenova, 2016].

The Sikhote-Alin mountain range contains one the richest (in terms of the number of species) temperate forests of the world, located in the mixed forest zone

between the taiga and subtropics (this territory includes the distinct Okhotsk taiga oceanic and Manchurian moderate continental assemblages of broad-leaved forests). The climatic conditions of the Central Sikhote-Alin are defined by the regularities of the typical monsoon climate of Primorsky Krai.

Figs 1–5. *Ametor scabrosus* Horn, 1873, holotype and paratype of *Hydrocassis lucifer* Shatrovskiy, 1989; 1 — habitus, ventral view; 2 — aedeagus; 3, 5 — labels; 4 — habitus, dorsal view; 1–3 — holotype; 4–5 — paratype. Photographs by V.M. Loktionov.
Рис. 1–5. *Ametor scabrosus* Horn, 1873; голотип и паратип *Hydrocassis lucifer* Shatrovskiy, 1989: 1 — габитус, снизу; 2 — эдеагус; 3, 5 — этикетки; 4 — габитус, сверху; 1–3 — голотип, 4–5 — паратип. Фотографии В.М. Локтионова.

Unfortunately, published lists of the water beetles of the Sikhote-Alin Nature Reserve are sporadic and fragmentary, which determined the aim of our study. Only two species from studied families have been described from this territory: *Hydrocassis lucifer* Shatrovskiy, 1989 (Figs 1–5) — junior synonym of the Holarctic *Ametor scabrosus* Horn, 1873 (Hydrophilidae) — and *Agabus (Gaurodytes) udege* Nilsson, 1994 (Dytiscidae) [Shatrovskiy, 1989b, 1992; Nilsson, 1994].

In this study, we provide new records of beetles of the studied families from the Sikhote-Alin Nature Reserve and some other areas of the Primorsky Krai.

Material and methods

This study is mainly based on specimens collected by M.E. Sergeev (the material on the list is indicated without the name of the collector), which are deposited in the Papanin Institute for Biology of Inland Waters, Russian Academy of Sciences (Borok, Russia). The material was collected mainly by sweeping with an aquatic net or using a light trap.

The natural landmarks in the Sikhote-Alin Nature Reserve are represented by traditionally allocated areas of its territory [Pimenova, 2016]. The material was collected in 18 localities of the nature reserve (Fig. 6):

1 — Terney: floodplain of the Serebryanka River (45.0335° N 136.3733° E);

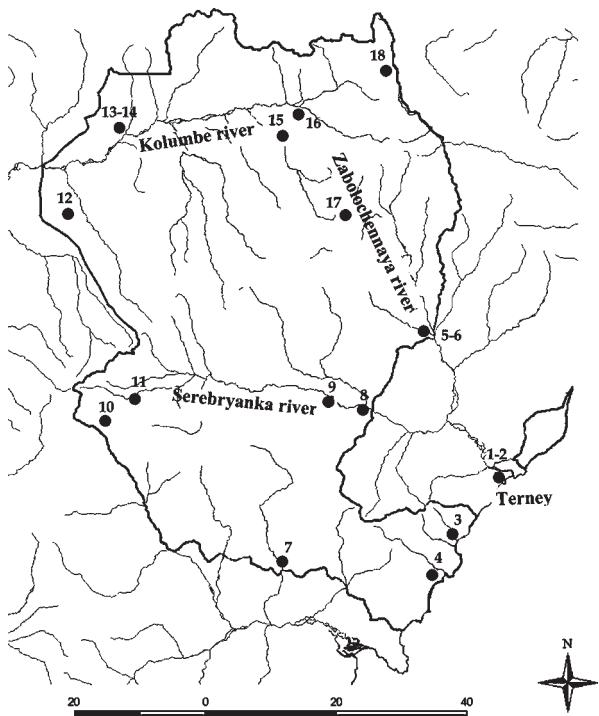

Fig. 6. Localities in the Sikhote-Alin Nature Reserve (numbers as in the text).

Рис. 6. Локалитеты на территории Сихотэ-Алинского заповедника (нумерация как в тексте).

- 2** — Terney: Ivan Ivanovich branch of the Serebryanka River (45.0833° N 136.6166° E);
- 3** — Blagodatnoe: vicinity of Blagodatnoe Lake (44.5714° N 136.3250° E);
- 4** — Golubichnoe: vicinity of Golubichnoe Lake (44.5430° N 136.3136° E);
- 5** — Yasnaya: floodplain of the Zabolochennaya River (44.5325° N 136.2018° E);
- 6** — Yasnaya: floodplain of the Berezovy Stream (45.2333° N 136.5166° E);
- 7** — Kuruma: floodplain of the Kuruma River (44.9152° N 136.2118° E);
- 8** — Ust-Serebryany: floodplain of the Serebryany Stream (45.0825° N 136.2243° E);
- 9** — Zimoveyn: floodplain of the Zymoveyn Stream (45.0829° N 136.1833° E);
- 10** — Kabany: floodplain of the Kabany Stream (45.1102° N 135.8672° E);
- 11** — Sporny: upper reaches of the Serebryanka River (45.1940° N 135.9901° E);
- 12** — Venera: floodplain of the Venera Stream (45.2962° N 135.8010° E);
- 13** — Yupiter: floodplain of the Yupiter Stream (45.5765° N 135.8928° E);
- 14** — Kolumbe: floodplain of the Kolumbe River (45.5387° N 135.9855° E);
- 15** — Rezvushka: floodplain of the Rezvushka River (45.5410° N 136.1660° E);
- 16** — Ust-Prokhodnaya: stream in valley of the Kolumbe River (45.3324° N 136.1365° E);
- 17** — Sakhalinsky: upper reaches of the Sakhalinsky Stream (45.4147° N 136.3713° E);
- 18** — Perevalnaya: floodplain of the Tayozhnaya River (45.6063° N 136.4454° E).

Photographs were taken with an Olympus SZX16 stereomicroscope and an Olympus DP74 digital camera and then stacked using Helicon Focus software. All scale bars are given in mm. The illustrations were post-processed for contrast and brightness corrections using Adobe Photoshop software.

Results

The results of this study are given as a list of species with information on the localities. The species list is based on the material studied. The species distribution data is mainly based on the Catalogue of Palaearctic Coleoptera [Fikáček et al., 2015; Hájek, 2017a, b; Hájek, Fery, 2017; Jäch, 2015; Jäch et al., 2016; Kobayashi et al., 2021; van Vondel, 2017]. New records from Primorsky Krai are indicated with an asterisk (*).

Shcherbakov), same place, 26–28.V.2015, 8 exs.; **11:** 1.VIII.2020, 5 exs.; **16:** 17.V.2018, 6 exs.; **17:** 30.V.2020, 12 exs.; **18:** 20.IV.2018, 11 exs.

DISTRIBUTION. East Siberia, Mongolia, north-eastern China, Russian Far East (Amur Oblast, Khabarovsky Krai, Magadan Oblast, Primorsky Krai), Japan [Shatrovskiy, 1989b; Hebauer, 1994, 1995; Prokin, 2009; Fikáček et al., 2015; Prokin et al., 2020].

Cercyon (Cercyon) aptus Sharp, 1873

MATERIAL EXAMINED. **4:** 15.VII.2017, 3 exs.

DISTRIBUTION. China (Hebei), Russian Far East (Kuril Islands, Primorsky Krai, Sakhalin), Japan [Shatrovskij, 1992; Hebauer, 1995; Ryndevich, 2003; Ôhara, Jia, 2006; Prokin, 2009; Fikáček et al., 2015].

Cercyon (Cercyon) numerosus Shatrovskiy, 1989

MATERIAL EXAMINED. **1:** 8.VIII.2018, 3 exs.; **3:** 1.VI.2018, 7 exs.; **4:** 5.VII.2019, 1 ex.

DISTRIBUTION. South Korea, Russian Far East (Kuril Islands, Primorsky Krai), Japan [Shatrovskij, 1992; Hebauer, 1995; Ryndevich, 2001b; Ôhara, Jia, 2006; Prokin, 2009; Fikáček et al., 2015].

Cercyon (Cercyon) olibrus Sharp, 1874

MATERIAL EXAMINED. **5:** 11.VII.2018, 1 ex.

DISTRIBUTION. China (Jiangxi, Tianjin), Russian Far East (Amur Oblast, Khabarovsky Krai, Kuril Islands, Primorsky Krai), Japan [Shatrovskiy, 1989b; Hebauer, 1995; Ôhara, Jia, 2006; Prokin, 2010; Fikáček et al., 2015].

Cercyon (Cercyon) symbion Shatrovskiy, 1989

MATERIAL EXAMINED. **3:** 1.VI.2018, 1 ex.; **4:** 5.VII.2019, 1 ex.

DISTRIBUTION. Russian Far East (Commander Islands, Kuril Islands, Primorsky Krai, Sakhalin, Isl.), Japan [Shatrovskiy, 1989b, 1992; Prokin, 2009; Fikáček et al., 2015; Sazhnev, 2018].

Cercyon (Cercyon) terminatus (Marsham, 1802)

Figs 11–14.

= *Cercyon (Cercyon) emarginatus* Baranowski, 1985, *syn. nov.*

MATERIAL EXAMINED. **5:** 11.VII.2018, 1 ex.; **15:** 28.V.2020, 2 exs.; **16:** 18.VI.2015, 5 exs.

DISTRIBUTION. Europe, North Africa, Near East, Kazakhstan, West Siberia, Mongolia, China (Shaanxi), Russian

Far East (Amur Oblast, Khabarovsky Krai and Primorsky Krai) [Shatrovskiy, 1989b; Fikáček et al., 2015], introduced to North America [Smetana, 1978, 1988].

NOTE. Studied specimens from Primorsky Krai morphologically are identical to *Cercyon emarginatus* Baranowski, 1985 description, but the external characters of this species are within the variability range of *Cercyon terminatus* (Marsham, 1802); the structure of the genitalia according to Baranowski [1985: P. 343, Figs 1–6] shows that type series is identical to that of specimens of *C. terminatus* from European Russia and Primorsky Krai (Fig. 4), as well as with pictures provided by A. Smetana for North American specimens [Smetana, 1978: Figs 133–135; Smetana, 1988: Figs 345–347]. Thus, a new synonymy is established here.

Cercyon (Clinocercyon) retius Ryndevich et Prokin, 2017

MATERIAL EXAMINED. **10:** 28.05.2015, 2 exs.

DISTRIBUTION. Russian Far East (Kunashir Island, Primorsky Krai) [Ryndevich, Prokin, 2017].

Family Hydraenidae Mulsant, 1844

Hydraena (Hydraena) riparia Kugelann, 1794

MATERIAL EXAMINED. **1:** 21.IV.2015, 4 exs. (D.E. Shcherbakov); **2:** 21.IV.2015, 8 exs. (D.E. Shcherbakov); **5:** 14–23.04.2015,

Figs 11–13. Male genitalia of *Cercyon terminatus* (Marsham, 1802) from the Sikhote-Alin Nature Reserve: 11 — parameres (lateral lobes) and phallobase; 12 — penis (median lobe); 13 — ninth ventrite. Photographs by A.A. Prokin.

Рис. 11–13 Гениталии самца *Cercyon terminatus* (Marsham, 1802) из Сихотэ-Алинского заповедника: 11 — парамеры и фаллобаза; 12 — пенис; 13 — девятый вентрит. Фотографии А.А. Прокина.

21 exs. (D.E. Shcherbakov); **10:** 24–27.IV.2015, 8 exs. (D.E. Shcherbakov).

DISTRIBUTION. Europe, Central Asia, Mongolia, West and East Siberia, China, South Korea, Russian Far East (Kuril Islands, Primorsky Krai), Japan [Jäch, 1988, 2015; Shatrovskiy, 1989a; Gusakov, 2009; Palatov, 2014].

The studied material from the Sikhote-Alin Nature Reserve is represented by 27 species of six families: Gyrinidae (1 species), Haliplidae (2), Noteridae (1), Dytiscidae (13), Hydrophilidae (9), and Hydraenidae (1).

Taking into account published data, the fauna of the studied families of the Sikhote-Alin Nature Reserve includes only 28 recorded species, which indicates an insufficient level of regional faunal investigation. For example, more than 80 species of beetles of the studied families are recorded from the Lazovsky Nature Reserve [Gusakov, 2009; Nilsson, Sundukov, 2009a, b, c; Prokin, 2009, 2010].

Additional records from Primorsky Krai

Additional material was collected by different persons in 2015–2020 from various protected areas and their buffer zones in Primorsky Krai (Fig. 14). Distributional data for species that were indicated in the list above are not provided again.

Family Dytiscidae Leach, 1815

Ilybius chishimanus Kôno, 1944

Copelatus weymarni J. Balfour-Browne, 1947

MATERIAL EXAMINED. Spassk-Dalny, light-trapped, 10.VII.2016, 2 exs.

DISTRIBUTION. north-eastern China, North and South Korea, Russian Far East (Amur Oblast, Primorsky Krai), Japan [Nilsson, Sundukov, 2009a; Hájek, 2017a].

Graphoderus adamsii (Clark, 1864)

MATERIAL EXAMINED. Spassk-Dalny, light-trapped, 10.VII.2016, 1 ex.

DISTRIBUTION. China, South Korea, Russian Far East (Primorsky Krai), Japan [Zaitzev, 1953; Lafer, 1989; Hájek, 2017a].

Hydaticus (Prodaticus) grammicus (Germar, 1827)

MATERIAL EXAMINED. Spassk-Dalny, light-trapped, 10.VII.2016, 1 ex.

DISTRIBUTION. Europe, Near East, Central Asia, China, North Korea, Japan (Hájek, 2017a); Russian Far East (Amur Oblast, Primorsky Krai) [Zaitzev, 1953; Lafer, 1992; Berlov, 1996; Nilsson, Sundukov, 2009a].

**Oreodytes mongolicus* Brinck, 1943

MATERIAL EXAMINED. Krasnoarmeysky Distr., Udygeyskaya Legenda National Park, floodplain of Armu River, 23.VII.2015, 1 ex.

Hydroporus uenoi Nakane, 1963

MATERIAL EXAMINED. Spassk-Dalny, light-trapped, 10.VII.2016, 1 ex.

Hygrotes (Coelambus) chinensis (Sharp, 1882)

MATERIAL EXAMINED. Spassk-Dalny, light-trapped, 10.VII.2016, 2 exs.

DISTRIBUTION. Mongolia, China, North and South Korea, Russian Far East (Primorsky Krai), Japan [Nilsson, Sundukov, 2009a; Hájek, 2017a].

Family Hydrophilidae Latreille, 1802

Berosus (Berosus) punctipennis Harold, 1878

MATERIAL EXAMINED. Spassk-Dalny, light-trapped, 10.VII.2016, 5 exs.

DISTRIBUTION. Mongolia, East Siberia, China, South Korea, Russian Far East (Amur Oblast, Khabarovskiy Krai and Primorsky Krai), Japan [Schödl, 1993; Hebauer, 1995; Ryndovich, Fikáček, 2013; Fikáček et al., 2015].

Berosus (Enoplurus) lewisi Sharp, 1873

MATERIAL EXAMINED. Chuguevsky Distr., Chuguevka, light-trapped, 1–3.IX.2020, 1 ex. (K.A. Ostapenko).

DISTRIBUTION. Mongolia, China, North and South Korea, Russian Far East (Khabarovskiy Krai and Primorsky Krai); Oriental region [Shatrovskiy, 1989b; Schödl, 1991; Hebauer, 1995; Prokin, 2009; Ryndovich, 2001a, 2011; Fikáček et al., 2015].

Hydrobius fuscipes (Linnaeus, 1758) sensu lato

MATERIAL EXAMINED. Spassk-Dalny, light-trapped, 10.07.2016, 9 exs.; Vladivostok, Botanical Garden, 25.VIII.2019, 1 ex.; Peter the Great Bay, Russky Island, 1.X.2019, 1 ex.

Hydrochara affinis Sharp, 1873

MATERIAL EXAMINED. Spassk-Dalny, light-trapped, 10.VII.2016, 8 exs.

Hydrophilus (Hydrophilus) dauricus Mannerheim, 1852

MATERIAL EXAMINED. Spassk-Dalny, light-trapped, 10.VII.2016, 1 ex.

DISTRIBUTION. Mongolia, East Siberia, China, Russian Far East (Amur Oblast, Primorsky Krai), Japan [Shatrovskiy, 1989b; Prokin, 2009; Fikáček et al., 2015; Prokin et al., 2020].

Anacaena lutescens (Stephens, 1829)

MATERIAL EXAMINED. Chuguevsky District, Chuguevka, light-trapped, 1–3.IX.2020, 3 exs. (K.A. Ostapenko).

DISTRIBUTION. Europe, North Africa, Central Asia, West Siberia, China (Xinjiang), Russian Far East (Primorsky Krai); North America [Prokin, 2009; Fikáček et al., 2015].

Enochrus (Enochrus) melanocephalus (Olivier, 1792)

MATERIAL EXAMINED. Spassk-Dalny, light-trapped, 10.VII.2016, 1 ex.

DISTRIBUTION. Europe, North Africa, Near East, Central Asia, Afghanistan, Mongolia, China (Inner Mongolia), East Siberia, Russian Far East (Primorsky Krai) [Ryndovich, 2001a; Prokin, 2009; Fikáček et al., 2015; Prokin et al., 2020].

Enochrus (Holcophilydrus) simulans (Sharp, 1873)

MATERIAL EXAMINED. Spassk-Dalny, light-trapped, 10.VII.2016, 3 exs.

DISTRIBUTION. China, South Korea, Russian Far East (Primorsky Krai), Japan [Shatrovskiy, 1989b; Hebauer, 1995; Prokin, 2009; Fikáček et al., 2015].

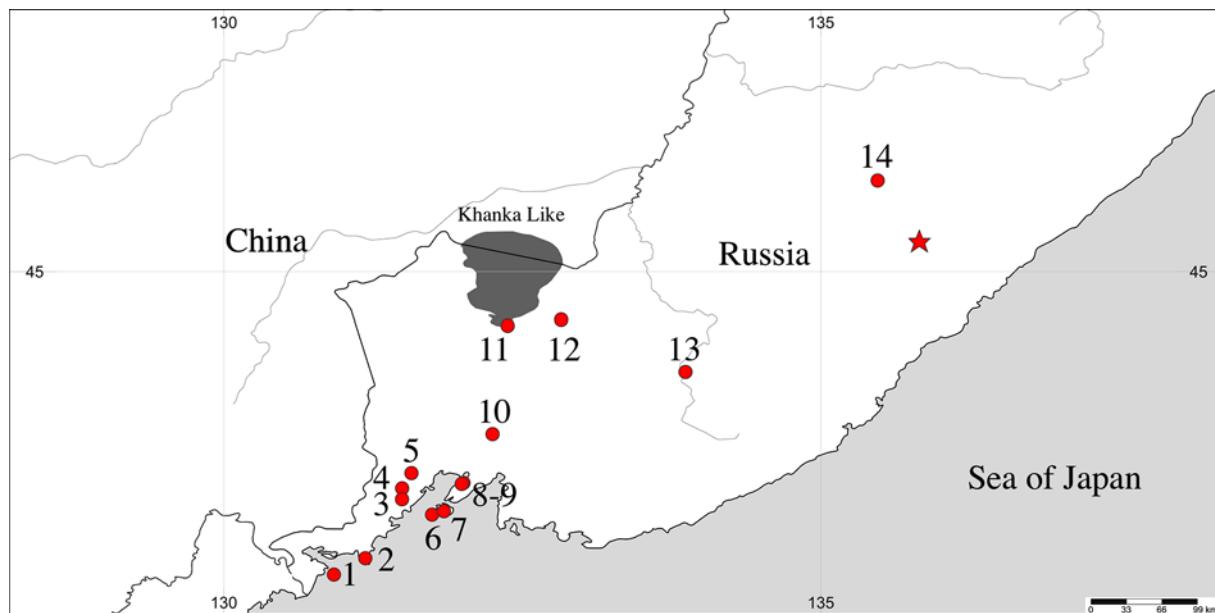

Fig. 14. Localities in Primorsky Krai: red star — The Sikhote-Alin Nature Reserve, red circles: 1 — Furugelma Island; 2 — Vityaz village; 3 — “Kedrovaya Pad” Nature Reserve; 4 — Barabash village; 5 — Zanadvorovka village; 6 — Popova Island; 7 — Russky Island; 8—9 — Vladivostok, Okeanskaya station and Botanical Garden; 10 — Kaymanovka village; 11 — Khanka Nature Reserve, Sopka Luzanova; 12 — Spassk-Dalny; 13 — Chuguevka village; 14 — Udygeyskaya Legenda National Park.

Рис. 14. Локалитеты на территории Приморского края. Красная звезда — Сихотэ-Алинский заповедник, красные круги: 1 — остров Фуругельма; 2 — с. Витязь; 3 — заповедник «Кедровая падь»; 4 — с. Барабаш; 5 — с. Занадворовка.; 6 — остров Попова; 7 — остров Русский; 8—9 — Владивосток, ст. Океанская и ботанический сад; 10 — с. Каймановка; 11 — Ханкайский заповедник, “Сопка Лузанова”; 12 — Спасск-Дальний; 13 — с. Чугуевка; 14 — национальный парк “Удзгейская легенда”.

Enochrus (Lumetus) quadripunctatus (Herbst, 1797)

MATERIAL EXAMINED. Spassk-Dalny, light-trapped, 10.VII.2016, 1 ex.; Peter the Great Bay, Far East Marine Reserve, Furugelm Island, 17.VIII.2018, 1 ex.

DISTRIBUTION. Europe, Near East, Central Asia, Mongolia, China, West and East Siberia, Russian Far East (Amur Oblast, Khabarovskiy Krai and Primorsky Krai) [Shatrovskiy, 1989b; Prokin, 2009; Ryndovich, Fikáček, 2013; Fikáček et al., 2015; Prokin et al., 2020].

Enochrus (Methydrus) affinis (Thunberg, 1794)

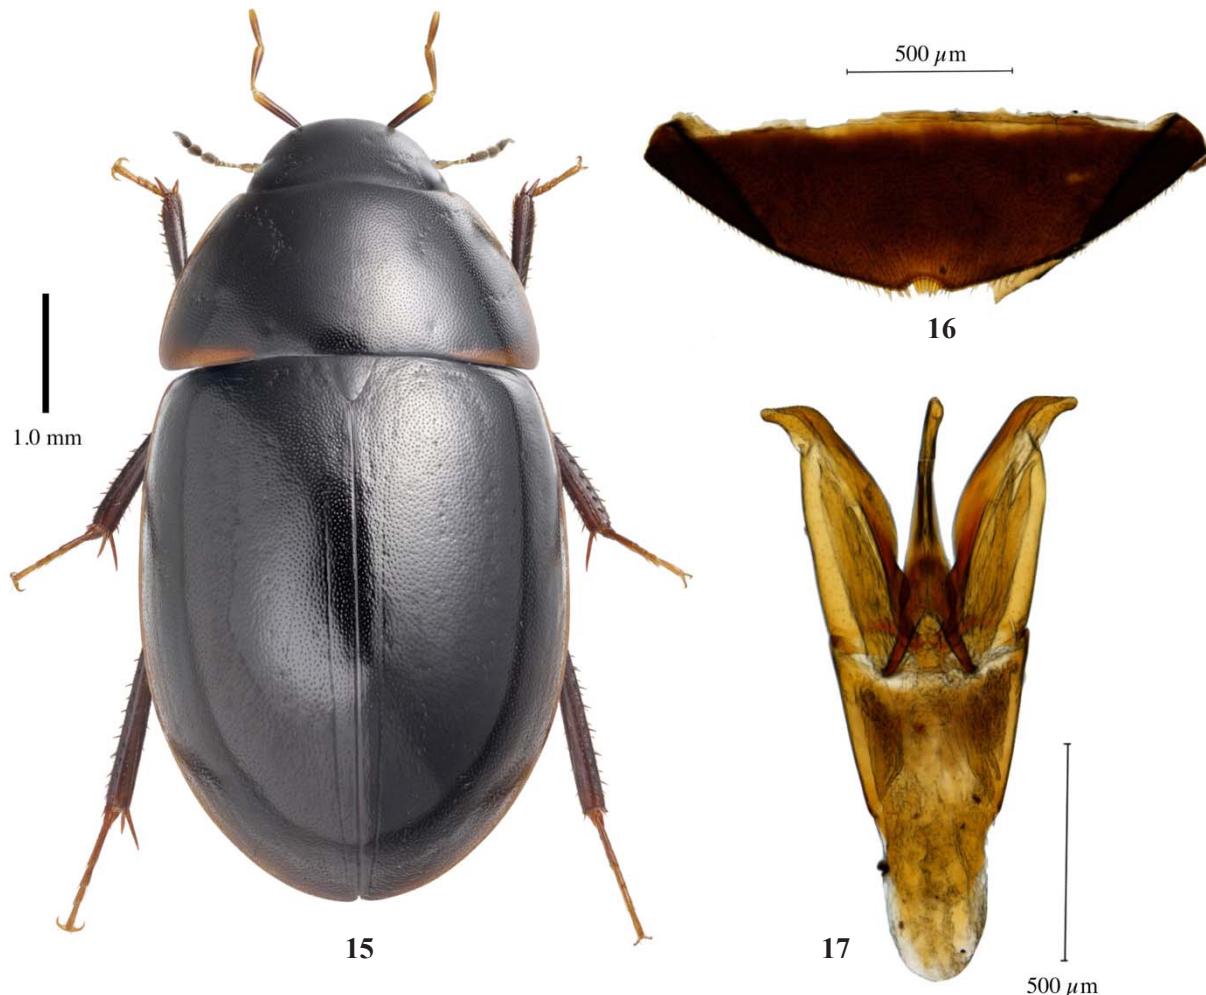

MATERIAL EXAMINED. Spassk-Dalny, light-trapped, 10.VII.2016, 3 exs.

DISTRIBUTION. Europe, Kazakhstan, Mongolia, China (Heilongjiang, Inner Mongolia), West and East Siberia, Russian Far East (Khabarovskiy Krai and Primorsky Krai, Sakhalin), Japan [Shatrovskiy, 1989b; Hebauer, 1995; Prokin, 2009; Fikáček et al., 2015].

Enochrus (Methydrus) japonicus (Sharp, 1873)

Figs 15–17.

MATERIAL EXAMINED. Spassk-Dalny, light-trapped, 10.VII.2016, 8 exs.

Figs 15–17. *Enochrus japonicus* (Sharp, 1873): 15 — habitus, dorsal view; 16 — fifth ventrite; 17 — aedeagus. Photographs by K.V. Makarov (15) and A.A. Prokin (16–17).

Рис. 15–17. *Enochrus japonicus* (Sharp, 1873): 15 — габитус, сверху; 16 — пятый вентрит; 17 — эдеагус. Фотографии К.В. Макарова (15) и А.А. Прокина (16–17).

DISTRIBUTION. China, Russian Far East (Primorsky Krai), Japan; Oriental region [Shatrovskiy, 1989b; Hebauer, 1995; Fikáček et al., 2015].

Enochrus (Methydrus) puetzi Hebauer, 1995

MATERIAL EXAMINED. Spassk-Dalny, light-trapped, 10.VII.2016, 4 exs.

DISTRIBUTION. Russian Far East (Primorsky Krai) [Hebauer, 1995; Prokin, 2009; Fikáček et al., 2015].

Crenitis (Crenitis) apicalis (Reitter, 1896)

MATERIAL EXAMINED. Khasansky Distr., "Kedrovaya Pad" Nature Reserve, Barabash village, 10.05.2019, 1 ex.; Ussuriysk, Kaymanovka village, Barsukovka River, 43.6437°N 132.2504°E, 18.06.2020, 11 exs. (I.A. Zabaluev).

Crenitis (Crenitis) kanyukovae Shatrovskiy, 1989

MATERIAL EXAMINED. Khasansky Distr., 2 km NW Zanadvorovka village, unnamed spring, 43.3172°N 131.5712°E, 235 m a.s.l., 10.VII.2020, 2 exs. (I.A. Zabaluev).

DISTRIBUTION. Russian Far East (Primorsky Krai) [Shatrovskiy, 1992; Hebauer, 1994, 1995; Prokin, 2009; Fikáček et al., 2015].

Coelostoma (Coelostoma) orbiculare (Fabricius, 1775)

MATERIAL EXAMINED. Khanka Nature Reserve, Sopka Luzanova landscape unit (natural boundary), 5.VII.2016, 1 ex. (M.E. Sergeev); Spassk-Dalny, light-trapped, 10.VII.2016, 11 exs.

DISTRIBUTION. Europe, Central Asia, China, East and West Siberia, Russian Far East (Primorsky Krai), Japan [Shatrovskiy, 1989b; Fikáček et al., 2015].

Cercyon (Cercyon) bifenestratus Küster, 1851

MATERIAL EXAMINED. Spassk-Dalny, light-trapped, 10.VII.2016, 1 ex.

DISTRIBUTION. Europe, Central Asia, Nepal, Mongolia, China, East and West Siberia, Russian Far East (Primorsky Krai), Japan [Shatrovskiy, 1989b; Hebauer, 1995; Fikáček et al., 2015].

Cercyon (Cercyon) marinus C.G. Thomson, 1853

MATERIAL EXAMINED. Spassk-Dalny, light-trapped, 10.VII.2016, 2 exs.

DISTRIBUTION. Europe, Kazakhstan, Mongolia, East and West Siberia, Russian Far East (Amur Oblast, Kamchatka, Khabarovskiy Krai and Primorsky Krai) [Shatrovskiy, 1989b; Hebauer, 1995; Fikáček et al., 2015].

**Sphaeridium bipustulatum* Fabricius, 1781

MATERIAL EXAMINED. Khanka Nature Reserve, landscape unit (natural boundary) "Sopka Luzanova", 6.VII.2016, 1 ex.

DISTRIBUTION. Widely distributed in Europe, North Africa, Near East, Central Asia, East and West Siberia; introduced to North America [Fikáček et al., 2015].

NOTE. The first record from Russian Far East and Primorsky Krai.

**Sphaeridium marginatum* Fabricius, 1787

MATERIAL EXAMINED. Khanka Nature Reserve, landscape unit (natural boundary) "Sopka Luzanova", 6.VII.2016, 1 ex.

DISTRIBUTION. Widely distributed in Europe, North Africa, Central Asia, West Siberia; introduced to North America [Fikáček et al., 2015].

NOTE. The first record from Russian Far East and Primorsky Krai.

Sphaeridium scarabaeoides (Linnaeus, 1758)

MATERIAL EXAMINED. Primorsky Krai: Khasansky Distr., "Kedrovaya Pad" Nature Reserve, 3.V.2015, 2 exs.

DISTRIBUTION. Widely distributed in Europe, North Africa, Near and Central Asia, East and West Siberia, northeastern China, Russian Far East (Amur Oblast, Khabarovskiy Krai and Primorsky Krai); introduced to the Afrotropical, Australian, and Nearctic regions [Shatrovskiy, 1989b; Ryndovich, 2001c; Fikáček et al., 2015].

Family Elmidae Curtis, 1830

Heterlimnius gapyeongensis (Jung, Kamite et Bae, 2011)
Figs 18–20.

MATERIAL EXAMINED. Ussuriysk District, 2 km S Kaymanovka village, Komarovka River, 43.6270°N 132.2650°E 23.VIII.2007, 1 ex. (K.V. Makarov), [deposited in Moscow Pedagogical State University, Moscow]; env. Ussuriysk, Kaymanovka village, Barsukovka River, 43.6437°N 132.2504°E, 18.VI.2020, 1 ex. (I.A. Zabaluev).

DISTRIBUTION. China (Liaoning), Nord and South Korea, Russian Far East (Primorsky Krai) [Jung et al., 2011; Jäch et al., 2016].

NOTE. Photographs of this species were published online by K.V. Makarov from Primorsky Krai (Khasansky District, env. Kedroviy, 10 km SES Barabash, 43.0833°N 131.5500°E, 17–24.VII.2018, window trap, K. Makarov and A. Zaitzev leg., 1♂), misidentified as *Heterlimnius hasegawai* Nomura, 1958 (<https://www.zin.ru/animalia/coleoptera/rus/hethaskm.htm>).

Figs 18–20. *Heterlimnius gapyeongensis* (Jung, Kamite et Bae, 2011) from Kaymanovka village: 18 — habitus, dorsal view; 19 — ninth sternite; 20 — aedeagus. Photographs by K.V. Makarov.

Рис. 18–20. *Heterlimnius gapyeongensis* (Jung, Kamite et Bae, 2011) из с. Каймановка: 18 — габитус, сверху; 19 — девятый стернит; 20 — эдеагус. Фотографии К.В. Макарова.

Thus, one species of Gyrinidae (*Gyrinus sachalinensis*), one species of Dytiscidae (*Oreodytes mongolicus*), and two species of Hydrophilidae (*Sphaeridium bipustulatum* and *Sphaeridium marginatum*) are recorded for the first time from Primorsky Krai. Three species (*Oreodytes mongolicus*, *Sphaeridium bipustulatum*, and *Sphaeridium marginatum*) are recorded for the first time from Russian Far East.

Acknowledgements. We are grateful to I.A. Zabaluev (Moscow, Russia), G.A. Nacharkin and D.E. Shcherbakov (Moscow, Russia), K.Á. Ostapenko (Vladivostok, Russia) for material provided by them, P.N. Petrov (Moscow, Russia) for checking the identification of *Ilybius anjae* and valuable review of the manuscript, H. Fery (Berlin, Germany), G. Gustafson (Lawrence, USA) and J. Bergsten (Umeå, Sweden) for providing some of the cited publications; V.M. Loktionov (Vladivostok, Russia) for processing photographs of the type specimens of *Hydrocassis lucifer*, and K.V. Makarov (Moscow, Russia) for photographs of *Gyrinus sachalinensis*, *Enochrus japonicus*, and *Heterlimnius gapyeongensis*. The work of A.S. Sazhnev and A.A. Prokin was carried out within the framework of a Russia State assignment no. 121051100109-1.

Competing interests. The authors declare no competing interests.
