

Obituary

Petr Petrovich Gambaryan (1925–2017)

Petr Petrovich Gambaryan, age 92, passed away on August 31, 2017, in Saint Petersburg, Russia. He was a remarkable person, a distinguished scholar, a leading scientific worker at the Zoological Institute of Russian Academy of Sciences, a Doctor of Biological Sciences, and a Professor of Zoology.

From an early age Petr Petrovich was a remarkably gifted individual with a strong passion for zoology. His diligence helped him overcome numerous life challenges. Petr Petrovich Gambaryan was born in Paris, France, on April 18, 1925, while his father Petr Pavlovich studied at the Paris-Sorbonne University. In 1929 the Gambaryan family returned to Armenia. Petr Petrovich's father, Petr Pavlovich, became an Assistant Professor at the Geological Institute of Academy of Sciences of Armenian SSR. Petr Pavlovich tragically died in an airplane crash near Tbilisi, Georgia in 1933. Petr Petrovich's mother, Natalia Petrovna, was left alone to care for six children, and she made a living giving French lessons. Having lost his father early in life, Petr Gambaryan became a great source of support for his big family, while continuing to be highly successful in his

studies. His incredible scholarly talent and an unwavering thirst for knowledge allowed him to seek an accelerated course of study, and he was accepted directly as a second year student at the Yerevan Zooveterinarian Institute. Continuing to combine studies with work in the prospecting geological expeditions, Petr Gambaryan soon transferred to the Biology Department of the Yerevan State University. In 1949, three short years after graduation, Gambaryan defended his PhD thesis “Adaptive features of forelimbs in Nehring’s blind mole-rat (*Spalax leucodon nehringi* Satunin, 1898)” at the Zoological Institute of Russian Academy of Sciences.

In 1961 Petr Gambaryan became a member of the Laboratory of Theriology at the Zoological Institute of RAS. In 1984 P.P. Gambaryan became irreplaceable as head of Functional Morphology Department and from 1986 served as its leading research scientist. Thus, Petr Petrovich had worked at the Zoological Institute of RAS for almost 50 years, while his entire length of employment added up to over 70 years total.

Petr Petrovich was an indispensable source of new ideas and a tireless field researcher. He participated in

numerous research expeditions to the Caucasus Mountains, Middle Asia, Cuba and Vietnam, helping refill the Zoological Institute collections with new valuable materials, including complete large mammal skeletons and carcasses.

P.P. Gambaryan is the author of over 100 publications, including 10 monographs, both in Russia and abroad. His comparative morpho-functional analysis covers a wide range of mammalian forms and addresses a plethora of adaptive evolution problems. Gambaryan's works on transformations of musculoskeletal system due to specialization in fossorial activity, jumping, running and swimming, deserve a special mention.

One of Gambaryan's main treatises is his fundamental monograph "How Mammals Run" (1974). This publication is a result of a multi-year research project conducted both in natural and experimental conditions. In the summary of the book, one can find classification of various modes and forms of running in mammals (more than 200 species from 6 orders). The monograph was later published in English (Gambaryan, 1974).

In the 1990s Petr Petrovich's area of scientific research interests expanded beyond the realm of functional morphology. He collaborated with researchers from Russia and Dr. Zofia Kielan-Jaworowska from Poland to reconstruct musculoskeletal systems of extinct mammalian species. As a result, several exciting articles were published. For example, "Postcranial anatomy and habits of Asian multituberculate mammals" (Kielan-Jaworowska & Gambaryan, 1994), "Masticatory musculature in Asian taeniolabidoid multituberculate mammals" (Kielan-Jaworowska & Gambaryan, 1995) and "Sprawling versus parasagittal stance in multituberculate mammals" (Kielan-Jaworowska & Gambaryan, 1997).

At the end of 1990s, Petr Petrovich Gambaryan together with Dr. Jean-Pierre Gasc from National Museum of Natural History (France) explored the biomechanics of some fossorial mammals (*Myospalax myospalax* and *Talpa europaea*) using cinefluorographical analysis and special observation methods. The findings are published in the following articles: "Adaptive properties of the musculoskeletal system in the mole-rat *Myospalax myospalax* (Mammalia, Rodentia)", cinefluorographical, anatomical, and biomechanical analyses of burrowing" (Gambaryan & Gasc, 1993); "Cinefluorographical study of the burrowing movements in the common mole, *Talpa europaea* (Lipotyphla, Talpidae)" (Gambaryan et al., 2002).

In 2000s, Petr Petrovich Gambaryan collaborated with his Australian colleagues in a study of locomotor apparatus of monotremes. This research effort resulted in the following publications: "Peculiarities of the hind limb musculature in monotremes: an anatomical description and functional approach" (Gambaryan et al., 2002); "An evolutionary perspective on the walking gait of the long-beaked echidna" (Gambaryan & Kuznetsov, 2013); "Shoulder girdle and forelimb myology of extant Monotremata" (Gambaryan et al., 2015).

In recent years, Petr Petrovich Gambaryan participated in several research grants supported by the Russian Foundation for Basic Research, focused on observation of morphological features of relict species from Laos — *Laonastes aenigmamus* (Diatomyidae) (Gambaryan et al., 2013, 2014).

Petr Petrovich Gambaryan's fruitful scientific research was appreciated and rewarded by the scientific community. In 1973 he received the award from the Moscow Society of Naturalists for his research related to mammalian modes of locomotion. In 1981 he became a laureate of Academician A.N. Severtsov Award at the USSR Academy of Sciences for a series of writings about the evolution of mammal locomotion.

Petr Petrovich Gambaryan stood out for his wisdom, sincerity and kindness toward others. His extraordinary enthusiasm, indomitable energy, and exceptional temperament attracted the attention of many young researchers. Many of his former PhD and graduate students and trainees, jokingly dubbed "gambaryanoids", recall the time spent working under his guidance with special warmth and respect.

Earlier this year, following heart surgery, Petr Petrovich Gambaryan fought against time to finish his new book on the fossorial adaptations in mammals. He was working on this monograph down to the last day.

Petr Petrovich Gambaryan will forever remain in our grateful memory and will continue to live on in the new accomplishments of his followers.
